NEWS IN BRIEF

PSS launch delayed

PSS, the Post Office's packet network that was due to open this month, has been delayed until the summer. Software to suit the Post Office's requirements is being developed in the US by Telenet and debugging is taking longer than expected. Telenet's UK agent for the Post Office contract is Plessey Controls of Poole, Dorset.

Bid for Serck
US aerospace and electronics conglomerate, Rockwell International has made a £33 million bid to take over Serck, a UK manufacturer of industrial valves. The bid values Serck shares at 27p each, and has the support of the Serck directors. Rockwell already owns 29.7% of the company.

Belfast centre
A SOFTWARE engineering centre proposed by the Post Office for a site near Belfast could provide up to 400 new jobs. The centre will be used to service the Post Office's communications network throughout the UK. About 40 qualified staff will be needed during the first year and up to 200 within five years. Support staff will make up the total.

PO joins Stack
THE UK Post Office has joined Stack, an associate member of Stack, Standard Computer Komponenten GmbH, based in Frankfurt, was formed five years ago by ICL, Plessey, Nixdorf and Control Data to set component standards and to act as a common buying front for its members (CW, March 6, 1975). Olivetti of Italy joined two years ago (CW, May 11, 1978).

CHAPPELL... "Interested in boosting software business, possibly in the US."

Chappell looks to 'open' Europe

EXPANSION into the US software business, in-house production of processor chips and the possibility of greater government support were issues raised by ICL's chairman of one month, Philip Chappell, last week.

He said the biggest single step for the industry would be the opening of frontiers by European countries to computer firms from other EEC countries.

On the software front Chappell said he was "interested in boosting"

ICL's subsidiary, Datskil, "possibly in the US".
Another "big issue" was how far ICL ought to go into microelectronic production. Chappell said the company would not produce memory chips, but mentioned the manufacture of uncommitted logic array chips as something ICL could be looking at. He welcomed the arrival of the National Enterprise Board's Imvoo microelectronics firm both because it meant there would be a UK supplier and because it would give ICL a greater choice.

Turning to government support Chappell said there was a need for greater public understanding of the extent to which other countries — he referred to Germany, Japan and the US in particular — supported their computer industries.

Chappell said he welcomed investment by US companies in the UK. "But," he added, "with the US having 86% of the world computer market, things have gone too far. Is this dominance acceptable to European companies in the medium and long term?"

Cautious welcome for schools' micros

THE government's £9 million plan for funding micro education in schools has been given a cautious welcome by teachers and researchers.
The general approach of concentrating on software and teacher training rather than hardware (CW, March 6) gets broad approval but to many the plan is too vague.

The National Union of Teachers said it welcomed any new cash but that this money was far outweighed by the hundreds of millions being taken out of education by general cuts. Charles Sweeten of Micro-computer Users in Secondary Education said the success of the government's plan depended to a great extent on a director yet to be appointed.

Emphasising the importance of centralisation, Sweeten suggested that the idea of appointing various existing schools as "centres of excellence" was "unsound".
There would be difficulties, he said, over who would coordinate hardware assessment and set standards. There was also lack of leadership from the Department of Education and Science on the whole issue and he felt that Education Secretary Mark Carisle should make a political statement on it.
Bob Lewis at Chelsea College

agreed that leaving the purchase of hardware to the local authorities was the only possible approach.
The £9 million would go nowhere if spent on equipment, he said, and experience here and in the US showed how easy it was for hardware to be brought in before teacher training was adequate.

Lewis foresaw authorities having difficulties in finding the money.

ICL to market Fortronic systems

TO strengthen its position in the banking market in the UK and Ireland ICL is now selling the Transaction Terminal System from Fortronic of Fife. A complete system is seen here in front of Dr Peter Aylett (left), director of ICL's UK division, and Hugh Smeaton, managing director of Fortronic, just after they had signed the marketing agreement.

The microprocessor-based configuration includes a plasma display, a printer and a magnetic card reader. The separate key board on the right is a security feature which enables a bank's customers to key in their own account numbers.
The Transaction Terminal System was originally developed by Fortronic in collaboration with the Clydesdale Bank and is being used by Clydesdale in a network which by next year will take in 380 branches with 1,500 terminals. The network was first announced about three years ago (CW, January 27, 1977).

ICL has already received an order worth more than £100,000 from the Bank of Ireland for a

Computastars details

ON your marks for Computastars 1980. The first UK heat is due to take place on April 27 and this year there will be two European heats in Holland.
More international teams are being invited to the finals which will be in Birmingham.
Full details of rules and an entry form will be published in next week's Computer Weekly.

modified version of the Transaction Terminal System. It will be used for foreign exchange calculation and branch accounting.
According to ICL a number of other banks and financial institutions are conducting trials of the Fortronic system for applications that include financial data capture, credit authorisation and the control of note dispensers.

UK M80s for IBM projects

more powerful than the IBM 4331, and CPP plans to take advantage of the M80's "strategic architecture" to field upgrade later this year to a Model 32 which is only marginally less powerful than the IBM 4341.
Until now CPP has used IBM bureaux like BOC Datasolve and CRL for its development work, but found that they were geared more to the development of applications programs than to systems software.

S Africans take over CAP subsidiary

P-E's managing director, John Fleming, explained that the company would retain complete access to CAP-CP's products and services, including training. Local recruiting and training is to be stepped up, using packages from CIM-Deltek of Chicago.

The new chairman of CAP SA,

with two megabytes of main memory and 700 megabytes of disc storage while CPP has paid £250,000 for a two-megabyte Model 3 configuration that includes 1,400 megabytes on disc.
One big attraction of Magnuson for CPP was that all IBM's operating systems can be run on the M80, including MVS which is not supported on the existing IBM 4300 series machines.
The M80 Model 3 is about 50%

Low-cost 16-bit mini from HP

HEWLETT-PACKARD has added a series of low cost compact 16-bit minicomputers to the bottom end of its HPB family. Called the L-series, the machine comes with a chip CPU fabricated by Hewlett-Packard itself, using complementary MOS/Silicon-Sapphire technology.

The machines in HP's performance HP1000 family already come with a CPU consisting of three CMOS chips. CMOS and SPS offer advantages of low power, high heat dissipation and the single chip CPU enables the complete L-series processor to be contained on a board measuring 6.75 x 11.5 inches.

The L-Series machines are supplied in the form of rack mountable boxes or complete system cabinets. Model 10, the latter costs £12,000 and includes 64K of main memory, a 12MB Winchester disc drive, 48 megabytes of floppy storage all housed in a chassis a VDU. The board machines including 64K cost £224 in quantities of 100.

IBM supports X21
IBM is reported to be supporting the X21 line protocol recommended for circuit switched digital data networks by CCITT. The company is understood to be producing modules that will be built into 3276 and 3705 minis and 3705 mainframes.

Briefing

System X misses out

THE Irish Ministry of Posts and Telegraphs has awarded the first £7 million worth of contracts to its £850 million five-year telecommunications programme to a joint venture between CIT-Alcatel, a major French telecommunications manufacturer, and Telexon, a domestic transmission equipment maker.

Britain's System X is thought to have missed out because it could not be put into production quickly enough. Further contracts are to be placed soon and are expected to involve L. M. Ericsson, the Swedish telecommunications company.

Via in London

THE Visa International credit card organisation which embraces Barclaycard, is setting up a computer centre in London to handle the switching of credit authorisation data between Visa's European members. At present this job is handled by Visa's base system in the US using transatlantic links.

Lolpzig highlights

A 16-BIT microprocessor — arranged as two eight-bit processor chips — and a daisy-wheel printer were the highlights of new East German products at last week's Leipzig Fair. But Western companies were finding it harder than ever to do computer business behind the Iron Curtain.

Full details: pages 18/17.

Immos cash threat

IMMOS is still waiting for a decision by Industry Secretary Sir Keith Joseph, about both its second £25 million funding, and its application for an Industrial Development Certificate for its first factory in Bristol. There is still a chance that he may give it to Parliament, pressure to have the plant sited in an assisted area. (Report, page 3).

Apples for teachers

SEVEN schools in the UK have been presented with Apple computers and accessories by Apple master distributor Microsense. A total of £30,000 of equipment was made available by the company.

Univac new division

A NEW division has been established by Univac to manufacture specialised semiconductors and integrated circuits, and the company is to invest \$50 million in expanding its existing production capacity at Eden, Minnesota. The new division will produce custom designed circuits, standard parts still being purchased on the open market.

Siemens moves

A SECOND-GENERATION laser printer is on the way from Siemens of West Germany, and the company is planning to add a frame to its catalogue.

Manufacturers slate UK lobby group

THE new lobby group for the UK computer industry, UKITO, has come in for yet more unfavourable comment following last week's criticism by the CSA (CW, March 13). The United Kingdom Information Technology Organisation has been attacked by the UK subsidiaries of several US mainframe manufacturers over its main objective of protecting preferential public procurement for locally-owned companies.

Honeywell's director of marketing operations, David Crofts, said that trying to continue preferential public procurement policies was not in the best interests of the customer, because his choice was restricted. Re-

ducing the competitive element, he said, meant that customers would not necessarily get the best deal.
Local industry should be encouraged by such means as grants rather than by single-tender purchasing, he added.

Crofts also cast doubt on ICL's claim that preferential treatment in other countries is based on the nationality of firms' ownership. In the US, he said, under the "Buy American" Act ICL's factories there were free to compete for government orders. UKITO is excluding from membership IBM UK-owned firms.

IBM UK also criticised UKITO's

aims, commenting, "Any policy, process or activity that seeks to protect the interests of some manufacturers while limiting the freedom of users to choose the equipment most suited to their needs will, we believe, be damaging to the computer industry and to the UK economy as a whole."

Burroughs and NCR have also expressed the view that trying to protect the interests of the UK solely on the basis of who owns companies' shares was not sensible.

Said a Burroughs spokesman, "The UK stands to gain more by giving encouragement to any company manufacturing here."

CROFTS: Preferential public purchasing is not in the best interests of the customer.

High-speed range replaces ICL 2903

A NEW processor with a formidable rated speed of three million instructions per second is at the heart of the new ICL ME 29 series, announced today as the successor to the 2903 series.
Two models are announced, the 35 and 45, and the series offers up to five times the throughput of the 2904, according to ICL.

It runs under a new operating system developed from the existing Exe, called TME, for Transaction Machine Environment, which supports up to 24 multi-task workstations designed to support operator mode, direct data entry and multi-access interactive working.

The Model 35 comes with 64 to 128K characters of microcode control memory, which has a cycle time of 155 nanoseconds. The Model 45 comes with twice as much microcode.
The main memory ranges from 256K to 1 megabyte, and data storage units at 1 megabyte with a maximum of 16,000 megabytes.

Massive

GOODYEAR has announced that it is to develop the "massively parallel processor" named by the US National Aeronautics and Space Administration for processing data from satellites (CW, January 18, 1979). The Goodyear machine will have 16,384 processing elements, four times the biggest ICL Distributed Array Processor.

International Computastars

THIS year Computastars, for the past two years the UK's biggest athletics contest for computer personnel, is going international. There are to be two heats in Holland and several other countries are being invited to send guest teams to the finals, to be held in Birmingham.
So get your entry in for the big 1980 show — full details and entry coupon on page 13.

'All extension' digital PABX from AJ

AN all-digital voice and data PABX is under development at a new division of Anderson Jacobson in Anaheim, California. Production is still some way off but it is likely to be announced some time next year.
The development is the main activity of a research team which until last July was part of Calcomp. It was sold off to Anderson Jacobson in the general re-organising of Calcomp which ended with the takeover by Sanders (CW, February 21).
The system uses codes in telephone handsets so only digital signals are handled by the switch. A major feature is the capability of having all extensions in use at the same time. Usually only 30% can be in use at once.

Transac favourite for stake in GA

TRANSAC of France has emerged as the front-runner among the contenders for a deal with US minitaker General Automation. Discussions involve Transac making an injection of capital, equivalent to 20% of the value of the company.

Transac is a subsidiary of CIT-Alcatel, itself part of the CGE group. It specialises in terminals, including automatic teller terminals for banking, and has built Incoform SPD series terminals under licence for about a decade. However Incoform, bought by Honeywell two years ago, has

now been merged with other Honeywell small systems divisions, and French observers expect the deal with Transac to be terminated shortly.
Although CGE last year sold its interest in Compagnie des Machines Bull, which holds the 53% French stake in Honeywell's Continental partner CIT-Honeywell Bull, it has reaffirmed its continuing interest in the computer industry, both through its GSI software and services subsidiary and through

Nonconformist state of the art

QUITE an outcry I've had from readers over the suggestion in *Which?* magazine that people who don't want to dress neatly should become computer programmers. Actually what the toothbrush testers said was: "If you're not keen on conforming, perhaps you'd better go for a 'creative' job or become a computer programmer."

Note the implication that creative jobs and programming are mutually exclusive. I don't know about this. I would have thought that the programmers who have been arranging for millions of pounds to be paid into their own bank accounts were pretty creative. How about the bloke in the US Army who put in a piece of code into a huge online system with a date switch on it, so to go off the day after he had been demobbed? Up came the message on all the consoles, "Your system will go down in 15 seconds from now." Carriage return line feed. Then Boom! Weeks of sorting out the chaos. There's a creativity for you, wouldn't you say?

It's "conforming" that is the

crucial word. Of course programmers can be expected to conform to specifications, standards, project timetables, budgets, that sort of thing. But do they refuse to conform over personal appearances? Some people think that programmers all look exactly the same: specifically, they have beards and blue suits (the male ones that is).

Most important of all is which claim that to "get on" you must wear a suit and tie; otherwise become a programmer. This means that if you become a programmer you won't get on. Oh dear, the ramifications of this are getting beyond me. Still, I am sure it is sensible to choose a career according to the clothes you get to wear. After all, that's why people become sellers and firemen isn't it? Never mind about aptitude and job satisfaction.

Evelyn Waugh claimed that when he went for the interview for his first teaching job the only question he was asked was whether he owned a dinner jacket. Well, clothes make the man.

Sacre bleu du printemps

MY colleague Claire Gooding tells me that the announcement of a recent software distribution deal in California was headed thus: "Software Module Marketing acquires world-wide marketing rights for ACEP." Whatever can those exotic West Coast programmers be getting up to now?

Many a slip (Grauniad)

A READER, Trevor Davies of BIS Applied Systems, has pointed out to me this remark that appeared in the *Guardian* the other day: "A programme costing £8 million has been launched by the Government to teach children about the uses and implications of the micro-drip."

My first reaction was, what an unkind way for the *Guardian* to describe Ian Barron, gallant founder of Immos, Britain's very own chip-making enterprise! But on reflection I suppose it was talking about new equipment for children to do their own in-travenous feeding of pet mice.

MICHELIE'S PRIVATEVIEW

IF asked about A. M. Turing's contribution to computing, most people reply with the Universal Turing Machine. This abstract Oalek, when provided with an unbounded tape on which has been inscribed (a) the data and (b) a description of a special-purpose machine, will potter up and down the tape, peering here, overwriting there, until, behold, remaining on the tape in solitary splendour is a succession of marks at which the Dealek halts.

The machine-description on the tape (we would say the "program") must be expressed in whatever language corresponds to the UTM's own table of instructions (we would say "interpreter"). Further, as a matter of taste, convention and general mental tidiness, it is ordinarily supposed that the Oalek does not run amok in the program part of the tape, re-writing symbols with the same abandon as when having its pre-ordained fun in the data space.

Those who devise and document programming languages are a special breed — tasteful, conventional and tidy-minded to a fault. Little wonder that the UTM which they turn out for their academics, whether sturdy creatures in the Fortran mould, or elegant prancers of Algol or Pascal extraction, are fitted with a restraining harness to make sure that the above-mentioned outrageous behaviour cannot occur. I refer to the conspicuous absence from all but a couple of experimental AI languages of facilities for operating on code as data, and executing data as code.

Not only is there nothing in Turing's formalism to say that a UTM may not do this, but he himself attributed enormous importance to the possibility that it might. In a lecture to the London Mathematical Society in February 1947 he clearly saw the potential phenomenon of program synthesis as providing the needed cornerstone of the future task of machine intelligence and learning.

Over 30 years later much work on program synthesis is at last in train, including in centres such as IBM's Yorktown Heights Laboratories where practical applications are in mind. The main stream, however, does not follow Turing's "learning by doing" motif. Rather, the rewrite decisions tend to be procedure-driven rather than data-driven, deductive rather than inductive. The small and

Turing's real place in our history

AISB workshop

A WORKSHOP on intelligent teaching systems is to be held at Leeds University from April 9 to 11. Sponsored by the Artificial Intelligence and Simulation of Behaviour Society, AISB, speakers will include Professor David Barron of Southampton; Dr J. S. Brown of Xerox Parc; Dr M. L. Miller, formerly of MIT and now with Texas Instruments; and Dr Patrick Winston, director of the AI lab at MIT. Full details of the workshop may be had from Dr Derek Sleeman, CSE, Project, The University, Leeds, LS2 2JG. Tel: 0532 31751, ext 7284/7108.

A human mathematician has always undergone an extensive training. Their training may be regarded as not unlike putting in a stream of data into a machine. One must therefore not expect a machine to do a very great deal of building up of instruction tables on its own.

No-one adds very much to the body of knowledge. Why should we expect more of a machine? Putting the same point differently, the machine must be allowed to have contact with human beings in order that it may adapt itself to their standards. The game of chess may perhaps be rather suitable for this purpose, as the moves of the opponent will automatically provide this contact.

Current research is beginning to generate a machine which synthesizes a set of executable representations of knowledge. Some of these are humanly easiliable, others not. Hazards arise, user-opacity in the latter form a current topic of debate.

In this, as in so many other things, Alan Turing saw further than his contemporaries. Appeal is currently being launched by the A. M. Turing Trust to collect £10,000 for a British-based annual Lecture. Those interested in contributing are invited to write to A. M. Turing Appeal, A. M. Turing Trust, Hawks Square, Edinburgh EH8 8XV.

FOCUS

SOME DPM's best friends and colleagues are often found to be sales managers. However, if sales executives follow the advice of my colleague Tradar, the friendship status could be short-lived.

Tradar believes there are two reasons why salesmen are reluctant to make their initial sales contact at managing director level — conscious or subconscious fear and inadequacy (CW, February 21 and 28). Tradar has omitted a third and possibly more positive reason.

Any salesman going over the heads of DP management would quickly find himself out of

No room at the top for DPMs

the installation, out of the running and out of potential orders. Tradar's view is that directors are, in the main, quite ordinary people, as vulnerable as the rest of us. DPMs, as it happens, are even more vulnerable and certainly considerably more sensitive where their job security and status is involved. Any directive from above in respect of choice of equipment would not be gracefully received by the DP team. Many DPMs would react by researching the pages of *Computer Weekly* for a new bill.

Choice and selection of equipment is not the end of the matter, in fact they are hardly the beginning. The managing director would rapidly discover that full-bodied co-operation is essential from all parties to get any new or proposed system running.

Confidence in such projects is all-important and this is hardly likely to be enhanced by the DPMs knowing that the sales manager has a closer relationship with the MD than that enjoyed by the DP team.

No DP manager worth his quiver of salt would wish to quote the MD from major selection procedures. But the MD involvement should be triggered by the DP rather than the sales team. At a suitable point in the selection exercise, the DPM will naturally want to make a full-scale presentation to senior executives of the company and this could well include a contribution from a selected list of potential suppliers.

The DP manager is paid to protect the MD from daily problems and crises. Similarly it is not necessarily the role of the MD to evaluate levels of technology, suitability, service and back-up and reputation of equipment suppliers.

Professor Donald Michie is head of the Machine Intelligence Research Unit at Edinburgh University.

to generate a machine which synthesizes a set of executable representations of knowledge. Some of these are humanly easiliable, others not. Hazards arise, user-opacity in the latter form a current topic of debate.

In this, as in so many other things, Alan Turing saw further than his contemporaries. Appeal is currently being launched by the A. M. Turing Trust to collect £10,000 for a British-based annual Lecture. Those interested in contributing are invited to write to A. M. Turing Appeal, A. M. Turing Trust, Hawks Square, Edinburgh EH8 8XV.

SRC buys 10 graphic systems

THE Science Research Council has spent nearly £50,000 of the £1.4 million allocated to its Distributed Computing Systems programme on 10 Terak 8510A monochrome graphic systems. One of them is seen here in the computer room of the Rutherford Laboratory's Atlas Centre being used by the technical secretary of the DCS programme, Dr David Duce.

The Atlas centre is taking two of the 10 Terak systems and the others will be used by some of the more than 20 university projects being funded by the SRC. The 8510A is sold in the UK by Dicos Electronics of Basingstoke, and manufactured in the US by the Terak Corp of Scottsdale, Arizona. The system is configured around a Digital Equipment LSI-11/2 processor and comes with 256 words of main memory and an independent 64K RAM which enables an unlimited number of different character sets to be created. Animated graphics and text can be displayed simultaneously.

Software schemes must meet EEC objectives

RULES for the EEC software support scheme, announced last week (CW, March 13) have been carefully framed to further a number of EEC objectives. Projects submitted for support will have to involve collaboration between users or companies from at least two EEC countries, and should not be set for launch before the last quarter of this year. Support is offered both for software development studies and projects, and for computer applications.

In the case of general software development, projects should further at least one of five EEC objectives. These are to implement and further the use of standards; to improve portability of software; to design for easy conversion; to enhance the efficiency of data processing systems; and to further the development of network management and distributed processing techniques in order to encourage the use of EEC standards.

In the case of computer projects, there are five objectives, one or more of which should be met. They should be applicable to the needs of different countries so that systems for environmental monitoring, air, land or sea traffic control, international transport or Customs would be appropriate.

Another possibility is projects which further EEC policy aims such as free movement of labour and capital, communications,

agricultural and regional policies, or energy, environmental or social policy.

Projects which aim to save public expenditure in fields like health and education, applicable in more than one country, are of interest.

Economically beneficial applications furthering Community aims in the field of standardisation of techniques such as computer aided design and process, industrial and administrative control will be considered.

Finally, applications implemented at Community level and having an impact on standards in distributed processing and communications will also be welcomed.

If projects cost £50,000 or less, support of up to 100% of the cost is available, otherwise the limit will be 50% of the cost.

Aid will take the form of interest free loans for the development phase and for the first two years of exploitation. After that they will be repayable with interest from the proceeds of exploitation over the following four years.

Applications have to be in by June 1, and selection of projects for support will be made in October. People wanting copies of the call for applications should contact the Computer Systems and Electronics Division of the Department of Industry on 01-212 5509.

Dundee decision

THE NCR factory at Dundee is now part of the company's newly-formed General Systems Division which covers terminal systems for factory data collection, banking and finance. The Dundee plant will also continue to build the NCR 8200, 8400 and 8500 computers.

memory and 20 or 40 megabytes of disc memory.

CMC-Europe is offering the system as the CMC 7030. There are no plans for Redifon to add to its UK product line at present.

Rexon Business Machines is a new company founded by Dr Ben Wang out of the proceeds of his sale of Wangco, the disc manufacturing company he founded, to Perkin-Elmer (CW, September 13, 1979). Dr Ben Wang is not related to Dr An Wang, founder and head of the business computer and word processor company which bears his name.

Export award for Prestwick

PRESTWICK Circuits, manufacturer of printed circuit boards, was among five companies to win an export award for smaller manufacturers. The award is sponsored by the British Overseas Trade Board, the Association of British Chambers of Commerce, British Airways and the Daily Express, and supported by the CBI, the TUC and the small firms division of the Department of Industry.

The 10 winning companies, five winners and five runners-up, increased exports last year by an average of 21.2%. Each company won a trophy, an expenditure certificate and a holiday for two in Kenya for a nominated employee.

CMC-Europe adds a business micro to its line

CMC EUROPE, the company being acquired by Redifon of the UK on behalf of its Redifon Computers subsidiary, has added a small business system from Rexon Business Machines Corp of Culver City, California, to its product line.

The machine is the Rexon RX30, a business microcomputer built around the Intel 8088 16-bit microprocessor, running under Rexon's Recap multitasking operating system. Programme supports up to eight display stations, and comes with up to 64K words of main

Warren Point study on real cost of micros for Dol this month

THE real costs and the disciplines needed to make effective use of microprocessors is one of the key sections of an interim report on the application of personal computers in business and industry which should be with the Department of Industry by the end of the month.

Prepared by Warren Point, the Stevenage systems and software house, the report is part of a study commissioned by the Department and due to be completed by May. Suggested by Warren Point, the main aim of the study is to produce an unbiased report for small company managements which may be considering the installation of a microcomputer system.

Brian Thompson, who is carrying out the study at Warren Point, said that it was not his objective to produce a comparative study of different machines, but rather to study them, with what they can offer the user, as a group.

Among the factors being considered are reliability,

availability of software packages; the problems of producing written software, and after-sales service and support. About a dozen systems have been tested, said Thompson, including the Pet, Apple and TRS-80, with more expensive systems such as the North Star Horizon, and Rair Black Box.

Though he did not wish to pre-empt the interim report, Thompson did indicate that he had not been happy with the quality of software available for these systems.

NCR for Hong Kong hotel

AN order for NCR's Modular Lodging System has come from the Hong Kong Royal Garden Hotel in Kowloon. Still under construction, the 470-room hotel will use an NCR 3280 microsystem with about 80 megabytes of disc storage in the front office. This will support seven VDUs and other peripherals.

... when you need a dependable supplier, an authorised distributor with a comprehensive range of products at keen prices, backed by large stocks for fast delivery, with full after sales support. We promise you a rapid response.

ANADIX DP8000
Exceptional value and high reliability. 84 lines per minute, 112 cps. Parallel and serial interfaces as standard. 8K ASCII set, 5x7 font. Variable length forms handling facilities. 1K buffer store. Options include 2K extra store IEEE interface.

from only £540

DIGITAL LA34
30 cps desk top terminal. Roll feed, paper width from 3-14 inches. EIA interface. 4 selectable character widths. Full 96 ASCII character set. 7x6 dot matrix. Options include a 20mA interface, tractor to accept sprocket feed paper and numeric keypad.

from only £859

LEAR SIEGLER ADM-3A
The most popular visual display in the world. 1800 character screen capacity. Cursor addressing. Dual interface. Auxiliary port. Wide range of speed and word formats. Options include Tektronix 4010 compatible graphics.

from only £570

LEAR SIEGLER ADM-31
Low cost VDU with two page display and full editing facilities. Dual interface, 10-3600 baud data rates. Upper/lower case character set. Cross addressing, address protected fields, dual memory. Optional polling and addressing, printer port.

from only £795

TELETYPE 43
Versatile, economic and reliable. 30 cps, serial interface keyboard printer, 132 or 80 columns. 94 ASCII set, 5x7 font. Crisp, high quality printout. Microprocessor controlled. Portable version. Character set options.

from only £799

TYPEWRITER TERMINAL
Two machines for the price of one. Typewriter style font for single documents, letters etc. Print feed continuous business stationery. Electric typewriter keyboard layout and touch. Left and right hand margin setting. Crisp, high quality printout.

from only £825

TECHTRAN 950
Mass data storage, high speed retrieval and intelligent data collection. Microprocessor control. 200K character storage per cassette. RS232C interface. Switch selectable speeds. Easy file oriented data storage. The 950 adds a powerful disc editor, high speed search and editing.

from only £995

TEXAS 810
Compact 180 cps 132 column printer. Optimised bi-directional printing. Adjustable tractor feeds, 3-16 inches, 9x7 dot matrix. RS232C interface. Forms control options. Other serial and parallel interface options. Compressed price option.

from only £1392

OP SPOT

What makes operators stay at an installation?

DURING my time as the Op Spot columnist I have been inclined to take the side of the operator when considering all sorts of matters relating to the highly demanding operations environment.

So I must admit to a moratorium of conscience the other week on hearing about the trouble a certain operations manager was experiencing in holding on to his staff.

Over a very short period the poor man had lost four operators and it had not been for the services of contract staff he would have to operate the system himself — with the help of the DP manager, no doubt.

"Why do you leave my installation? What can I do to hold on to them?" he asked.

My immediate response was that operators go for many different reasons. But quite often they have just had enough of the installation, and on seeing a better-paid position advertised in one of the computer trade papers, decide it's time to move on.

On reflection, I realised that my comment was a bit short and may have seemed flippant. That was unintentional. So for the person who telephoned me, and any other manager who is having difficulty in keeping staff, let's consider some of the things that keep operators happy.

Well, we live in a world of rising costs and prices, so a competitive salary is of prime importance.

Salary reviews should be carried out by the manager on a regular basis, and the best and most efficient operators should be rewarded accordingly.

Next come opportunities for career progression and the training scheme provided for the operators at the installation.

At the smaller site, the operators should have the chance of moving out of operations and into programming after two years or so.

At the larger installation, the best operators should be encouraged to consider such areas as technical support, systems programming or the TP section (provided the site has one, that is).

The training scheme is of great importance. It should start with a course on basic concepts, include hardware and the operating system, and go right through to such technical subjects as JCL writing, fault diagnosis and dump cracking.

I have known operators who were really fed up with an installation to "hang on" for another six or 12 months because they have been booked on to one or more courses.

Such courses enable the operators to get away from shift work for a week or more and have a taste of hotel life, as they often take place away from the installation. It makes for a bit of a change.

The attitude and approach of the shift leader can also have a considerable influence on the operator who is undecided whether he should stay at the installation or go to another.

One shift leader I used to work with was far too easy-going, with the result that the operators liked rather than respected him.

Another went to the other extreme and earned himself some uncomplimentary nicknames — along with the grudging respect of his operators.

As I see it, the shift leader must seek a balance between being the head of his shift team and staying on good terms with the operators.

On the one hand, he must ensure that the operators get in on time, behave themselves in the computer room, and generally work as a team to meet deadlines and provide the best possible service to the user.

On the other hand, he must treat the operators fairly by reporting their complaints to the operations manager. He must also let the manager know which of the operators are best equipped to move into more technically demanding posts.

The shift leader who adopts this sort of approach is extremely valuable and cannot be held responsible for staff leaving the installation.

The manager looking to keep his staff should not underestimate the importance of the shift pattern employed at the site.

It's a good idea to check every now and again that the operators are happy, with the shift pattern and if the majority are not satisfied, to alter it, however slightly.

Take, for example, a site where the conventional eight-hour, three-shift pattern is employed. If a number of the operators have no transport and live a fair distance from the installation, then it might be better to start the day shift at 8.30, rather than 8.00.

Similarly, the evening shift should end in good time for the operators to get home by means of public transport if need be. Even better, the site might pay taxi fares for the evening shift team, and the night shift when they happen to finish early.

Too often the operators get the work finished early on the night shift only to wait around for the day shift to report for work. In my opinion, two of three operators are quite enough to effect the handover.

The night shift also provides the operators with some free time. This is wasted if they don't have a decent rest room in which to spend it. It is extremely important that the operators have a place where they can unwind away from the noise and bustle of the computer room.

Facilities should also include a place where the operators can prepare and cook food when on the night shift. Some sites provide meals free of charge — that can't be bad.

Anyway, these are a few of the factors which will cause an operator to stay if the site has got the balance right — or leave if it hasn't.

He emphasises the need to protect company data which more often than not has been gathered at considerable expense and would be very costly to replace.

The loss of marketing research data, for example, would lead to expensive field research and delays in production. Equally serious, it might fall into the hands of one of the company's competitors.

The data centre manager and DP auditor should consider each major application and how the loss of service would affect the company.

After assessing how critical the main applications are, the next step in the audit is to use the information as a basis for specifying security objectives for the centre. This means establishing standards relating to power supply and back-up, threat from fire and water, access controls, personnel policy, contingency planning, insurance, and so on.

The next step is to draw up a checklist of questions based on the centre's security objectives. Responses to checklist questions should be made by the centre manager and other staff in the form of "yes" and "no" and the validity of the answers should be checked by the auditor.

That information should be used as the basis of a continuing security review, under the headings of hardware, installation, DP equipment, data, software and documentation.

The security threat should be classified as low, medium, or high, and the following criteria:

- Destruction — the loss of total loss of a DP asset; intentional or unintentional; causes, such as fire, explosion, sabotage or vandalism.
- Fraud/theft — use of an asset for personal gain.
- Human error — lost or mistakes on the part of an employee.
- Disclosure — release of information to unauthorized personnel.
- Equipment failure — corruption of data from electronic or mechanical equipment failure.

The security threat should be interpreted in the extra cost or loss of business resulting from destruction of an asset, relative to the time when the normal working order is restored.

Further steps in the audit are to determine whether the security objectives drawn up at the beginning of the process are, in fact, effective.

They then select measures in line with company policies and reduce the level of risk at the lowest possible cost.

THE international regulations which preclude governments from giving preferential treatment to their national computer companies after the end of this year hold no fears for Jean-Pierre Brulé, managing director of CII-Honeywell Bull.

"The public sector will surely continue to have a purchasing policy," he said. "The alternative is unthinkable. I am convinced that they will continue to use their enormous purchasing power to the benefit of the French computer industry."

"The French computer industry includes several companies, of which ours is the biggest."

"The rumours in the Press of an agreement with a Japanese company are totally without foundation," he said. "We do not rule out mere marketing of a product, but we have not talked about it. But that is something quite different from collaboration."

On the controversial subject raised in the French Press of the possibility that CII-HB might begin marketing IBM-compatible mainframes from Hitachi in the future, Brulé was non-committal.

by Bernard Allen

Management course

BIS Applied Systems is to hold a three-day course on operations management. Entitled Computer Operations — Planning and Management, covers staff management, and financial planning and control. It takes place at the Queens Hotel, Eastbourne, from March 24 to April 2 and costs £300 per head. For details contact BIS Applied Systems on 01-633 0888.

Risks to installation security highlighted

THE average company has come to rely heavily on its computer centre. So much, in fact, that disruption there might result in great inconvenience, loss of sales, or even force the company out of business.

For these reasons, far greater attention should be paid to data centre security, according to a portfolio by Auerbach.

Called the Data Centre Security Audit, it is one of the March updates to Data Centre Operations Management and highlights some of the risks facing the average installation.

The author points out that DP activities can be disrupted by intentional destruction or theft of files or equipment; by employee negligence; and environmental disasters, such as floods and fires.

He emphasises the need to protect company data which more often than not has been gathered at considerable expense and would be very costly to replace.

The loss of marketing research data, for example, would lead to expensive field research and delays in production. Equally serious, it might fall into the hands of one of the company's competitors.

The data centre manager and DP auditor should consider each major application and how the loss of service would affect the company.

After assessing how critical the main applications are, the next step in the audit is to use the information as a basis for specifying security objectives for the centre. This means establishing standards relating to power supply and back-up, threat from fire and water, access controls, personnel policy, contingency planning, insurance, and so on.

The next step is to draw up a checklist of questions based on the centre's security objectives. Responses to checklist questions should be made by the centre manager and other staff in the form of "yes" and "no" and the validity of the answers should be checked by the auditor.

That information should be used as the basis of a continuing security review, under the headings of hardware, installation, DP equipment, data, software and documentation.

The security threat should be classified as low, medium, or high, and the following criteria:

- Destruction — the loss of total loss of a DP asset; intentional or unintentional; causes, such as fire, explosion, sabotage or vandalism.
- Fraud/theft — use of an asset for personal gain.
- Human error — lost or mistakes on the part of an employee.
- Disclosure — release of information to unauthorized personnel.
- Equipment failure — corruption of data from electronic or mechanical equipment failure.

The security threat should be interpreted in the extra cost or loss of business resulting from destruction of an asset, relative to the time when the normal working order is restored.

Further steps in the audit are to determine whether the security objectives drawn up at the beginning of the process are, in fact, effective.

They then select measures in line with company policies and reduce the level of risk at the lowest possible cost.

Last Saturday, the French government's four-year support programme for the national computer manufacturer CII-Honeywell Bull, which is 53% French-owned, came to an end. A confident Jean-Pierre Brulé, managing director of the company, gave the French weekly *Ordinateurs* a long interview from which we publish excerpts.

"We will presumably continue to receive contracts, and we will accept them wherever they match our business objectives."

On the controversial subject raised in the French Press of the possibility that CII-HB might begin marketing IBM-compatible mainframes from Hitachi in the future, Brulé was non-committal.

HIS-Italis floated in several publications, but I know of no concrete foundation for these proposals.

Asked whether he expected CII-HB to remain ahead of Siemens in the European market despite the industrial power of the latter, Brulé evaded the question.

"Siemens has grown rapidly. It is true," he said. "Nevertheless, it is still behind us in terms of market share and turnover. I'm cautious about putting figures on these things, but they must be about 30% smaller than we are."

"ICL is much closer to us in terms of turnover. Indeed we are so close to each other that we can pass them one year and they can overtake us the next simply as a result of exchange rate fluctuations. Clearly our objective is to be and to remain number one in Europe."

Brulé was cautious about committing himself to collaboration with other European companies.

"We have done several things in this area. For example, although we build our own minicomputer, the Level

PEOPLE and EVENTS

Young Brain of the Year

SEARCH for the Young Computer Brain of the Year is now on.

Sponsored by the Sunday Times Magazine and Commodore Business Systems, this new annual competition aims to encourage young people to devise ways of using computers for the benefit of society.

Organised in association with Business International, the competition is divided into three categories of entry and entries must be in the form of project essays outlining the proposed application.

The prizes, donated by Commodore, include £500 or a Commodore Pat microcomputer for the winner of each class, and £250 or a Commodore Pet 8K microcomputer for the second in each class.

The overall winner will receive an extra £1,500 and a specially designed trophy.

Closing date for entries is August 30.

IEE secretary to retire

SECRETARY of the Institute of Electrical Engineers for 18 years, George Gahnbrough is to retire at the end of May.

He is to be succeeded by Howard Lusty, managing director of GEC Electronics. Lusty was made a director of GEC in 1978 and was elected a fellow of the IEE in 1979. He is a member of the Electrical Technology Requirements Board, the BBC Science Consultative Group and the Joint Industry/Academic Board responsible for the four-year course in Engineering at Imperial College.

Brian Burka has become sales executive with Sigma Electronic Systems. He formerly worked for Tektronix.

Directors appointed at Geest bureau

EASTERN Computer Services, the Peterborough-based Geest computer services bureau, has announced the appointment of Les O'Reilly as managing director. Colin Read, formerly sales manager and Keith Jolly, who was previously data centre manager at ECS in Peterborough, have both become directors of the company.

Jim Kne of VLI has become head of all group systems and programming staff businesses known as Computer People. Work People, a new division within VLI, will be run by former managing director of Co-Operators, Clyde Perkins.

Margaret Harper has joined CMC's technical support department at the Bristol office where she will be involved in training. She joins as a graduate from Southampton University.

Brian Burka has become sales executive with Sigma Electronic Systems. He formerly worked for Tektronix.

Valerie Barnea has joined Lowndes-Ajax Computer Service as a sales executive. She was previously with the Civil Service in Chesham in the internal audit section.

Jim Baird has become marketing manager of AVX, the multilayer ceramic capacitor manufacturer. He was previously with ITT.

Mike Dalley has become field sales manager to head Euro Electronic Instruments' new computer peripheral division. He was formerly technical sales manager with the company.

Geoffrey Griffiths, a former Southern branch manager with Redifon, has become marketing manager of the UK operation division of Arbat (UK).

Alan Hicka has been appointed sales manager at Business Computers (Systems). He was formerly an account manager with Unilever Computer Services.

MICROPROCESSORS were in the news again when the BBC's lunchtime programme Pebble Mill at One featured two Honeywell Control Systems products in the show's weekly episode. Energy consultant Geoffrey Perdes explained the operation of Honeywell's microprocessor-based Optimiser optimum start and stop control and the 1000 building management system during an interview programme presented by Foster.

On camera in our picture to the right are Mark Foster, Geoffrey Perdes and Honeywell's Tony Grey (seated).

First round of National Game

FIRST round of the 1980 National Management Game has been completed. Over 100 teams took part in the round which was held in March and April.

The game, now in its 10th year, is sponsored by the Institute of Chartered Accountants, ICL, the Financial Times, the CBI and the Institute of Directors.

Competition continues "knock-out" basis in the subsequent rounds through a further three until four teams are left to compete in the London final.

Robert Sorenson, president and chief executive officer of Perkin-Elmer, has become chairman of the board. Horace McDonnell becomes president and chief operating officer.

David Coleman has been appointed general manager of Courier and Data Transit. He was formerly an engineer with Bawac.

Chuck Deeny has become the director of business development for Execucom Systems Corp. Until recently he was manager of special projects for Selacom Delta.

Exxon sales force for office products

A SINGLE marketing organisation for the whole range of office systems products being made by subsidiaries of Exxon is now being set up, having been suggested over two years ago. The as yet unnamed organisation is being headed by Bob Contino, who recently joined Exxon from IBM.

NEWS IN BRIEF

Micros for doctors

MICROSYSTEMS for the medical profession are to be marketed by a new company called Medicom, formed by microsoftware specialists Adda Computers.

Medicom's first product will be a Commodore Pet-based patient records system called the Practice Monitor. It has been designed specifically for GPs and handles analysis of patients by age, sex, disease and treatment given. It comes with 32K main memory, a cassette deck and 10 blank cassettes for £1,310.

Into Europe

TELEX, which sold the European side of its IBM compatible peripheral marketing operation to Memorex two years ago, is moving back into Europe as an OEM supplier. Based at the Ealing, West London, offices of Telex subsidiary General Computer Systems, Telex Computer Products will start by selling a 19-inch rack mountable 8250 bpi tape drive called the Mini-Tape 8250.

Lion discount

DISCOUNTS of 15% are now available on kit sold by Lion Micro Computers of Tottenham Court Road. The offer lasts until April 5 and covers the Commodore Pet, the ITT 2020 and the Sharp and North Star microcomputers.

Infonet extended to Hong Kong

INFONET, the remote computing service, is to be extended to Hong Kong this spring. Computer Science Corp of El Segundo, California, which runs Infonet, has signed an agreement with Chartered On-Line, a jointly-owned subsidiary of the Chartered Bank of Hong Kong and two local trading companies, for local marketing and technical support of the service.

Agent in France

SYSTEMS Industries (Europe) of Woking, Surrey, the European marketing arm of the US-based minicomputer disc systems manufacturer, has signed up Ganerim SA as its exclusive agent in France. Ganerim is a subsidiary of the French electronic equipment distributor CDME.

Picture demo

PICTURE PRESTEL is to be demonstrated for the first time in public at Viewdata 80 next week at the Wembley Conference Centre. The Post Office has developed the system to allow pictures to be viewed on a normal colour television picture to be used for mail order catalogues and classified advertisements.

Other languages

THE DMS Display Management System on the IBM 6100 is to support other languages as well as Cobol. Designed for online program development, DMS was kit by the Cobol compiler delay (CVI) November 15, 1979).

IBM. Included in the marketing effort will be electronic typewriters from Qyx, word processors from Vydec, and Qwip facsimile machines.

These are all fairly small companies constrained at the moment by their lack of sales outlets, so the central sales force should help considerably in their growth.

Office systems form one of four business lines under the Exxon Information Systems banner. The others are com-

ponents, communications systems, and computer systems.

Another company in this area has been set up by Exxon Enterprises, in Princeton, New Jersey. This is called Xonex, and it is doing research and development into software for future office products. No products are being worked on at the moment, but development is being done of software techniques and support systems that may be required in the future. Three staff have recently joined Xonex from RCA.

Butler Cox to issue 10 reports on viewdata developments

BUTLER COX, the London-based market research firm, is planning a series of 10 reports over the next two years to examine the experiences and plans of organisations involved in developing viewdata systems.

Designed for organisations which might want to operate in the viewdata market or use a system to improve internal information handling, the reports aim to identify trends in the worldwide viewdata market, covering residential and business markets for both public and private systems, and to make predictions of developments over the next five years.

Butler Cox has produced two previous subscriber-backed reports on the impact of viewdata in the US and in Europe.

IBM offers free seminars to Civil Service

FREE, one-day seminars on how and where its systems are used in government are being offered to Civil Service staff by IBM. But the company has denied that it is seeking to take advantage of the ending this year of the government's ICL preference policy (CW, February 7).

Advertisements in three Civil Service journals invite interested staff to fill out and return a coupon to reserve a place at one of the planned seminars, to be held in London on March 20 and April 30. By doing this they will also receive a copy of an IBM publication, Links With Government, which has been prepared for the seminars.

"We are not doing anything new," explained an IBM spokesman.

Credit agency \$1m Burroughs order

AN ORDER for a dual Burroughs B8800 Global Memory System with 8 megabytes of main memory and 8,400 megabytes of disc storage has been placed by the United Association for the Protection of Trade.

The credit information agency will use the system, which is valued at over £1 million, to help with the 10 million credit authorisation inquiries it receives each year from its 11,000 members.

\$900 saving

A SAVING of \$900 on 128K-byte memory expansion boards for the Hewlett-Packard 9845 microcomputer system is being offered by Abacus Computers. Its price for the board is \$2,700 compared with the HP's \$3,600.

TWO supermarket groups, International Stores and Sainsbury, are evaluating laser-scanning equipment at selected sites.

Both companies are initially using IBM retail systems, but Sainsbury has said it will eventually switch to an NCR 1255.

Fourteen laser-scanning checkouts have been installed by International at its Folkestone superstore and the two IBM 3851s there are handling price look-up functions for about 8,500 products. Barcoding on each item, whether manufacturer marked or marked internally by store staff, is scanned by the check-outs and stored by the computer. Transaction details are sent daily for batch processing to IBM's Warwick bureau. Eventually international hopes to process transaction data on an IBM 3031 at its head office in Bournemouth.

Our picture also shows laser scanning at Sainsbury's Broadfield branch.

Cable & Wireless UKS - A Unique World of Experience in Communication Systems.

Cable & Wireless UKS has a total capability embracing all aspects of telecommunications and data handling systems in the U.K.

A capability backed by unrivalled expertise and over a century of world-wide communications experience in the Cable & Wireless Group.

A total capability in planning, design, installation and training; in providing hardware, software, systems, networks. And when the job's done, a comprehensive country-wide maintenance service. A capability no manufacturer can match.

And more than that... We have the widest possible choice of equipment from the world's leading suppliers. So you get the best package to suit your specific needs.

We've already engineered systems for some of the major organisations in the country. And we can do the same for you - however large or small your requirement.

Unique capability, expertise and experience - at your service.

MICRO NEWS

Schoolchildren need a broader understanding of computers—MP

THE need for children to have a broad spread of understanding of the use and application of computers was emphasised several times last week by Gary Waller, Conservative MP for Brighouse and Spenborough, at a meeting of the Computer Remiters Association.

He had been asked to address the association's members because, according to CRA chairman Tim Keen, it is now starting to mount a campaign to extend both the use of microcomputers in education, and the ways in which it can support increased use of computer-based educational systems.

Waller stressed that it was vital for children to have at least a basic understanding of how computers operated if they were to be able to cope with work and leisure in the future. Not all children, he said, would be able to make the grade as programmers, analysts and other computer-oriented specialists. However, many children would in the future have to work with or around computer-based systems, and an understanding of how they operated must therefore rapidly become an integral part of their education.

Such an understanding would also help overcome the current problems of inflexible attitudes to the type and location of work, he said. "Children must get used to the idea of having a flexible attitude to what type of job they do."

The MP welcomed the money that has just been made available for micro education in schools, but said that he personally felt that £20 million over a four-year period was too little to spend on such an important subject. It would not be enough to ensure that all schoolchildren had access to sufficient facilities for them to gain experience in computer operation and use.

"The money is an investment for the future," he said, "and more should be made available."

In terms of employment, however, it was a future that was hard to predict, especially

for the layman. Waller talked of the contradictions that had been presented over the recent past in the various statements and reports on the implications for future employment of the application of microelectronics. He quoted as examples the statements of Professor Tom Stoner of Bradford University, who has predicted that in the future all the country's manufactured goods will be produced by just 10% of the labour force, and compared it with the Rothschild report, which has put forward the idea that the

application of new technology will lead to the creation of many new and as yet unidentified jobs. For politicians to formulate constructive policies to deal with these possible futures was difficult, he said, because they liked to work to five-year plans only.

He does see, however, a strong place for the UK as a base for the development of new microelectronics-based products and systems. "I see this country as being well-equipped with the potential skills," he said.

The HP-85—fine for scientists, but "useless for small businesses."

by Martin Banks

Panasonic's new system

Here is one of the first signs of the new National Panasonic microcomputer system, which is just becoming available in the country.

One company already working on software support for the system is Phipps Associates, a consultancy operation owned by John Phipps, who used to be at Hoskyns Systems.

He has developed a high-level monitor software package which handles all operation commands with the system, and checks all keyboard input data before passing it over to the application program. It also provides enhanced screen editing facilities. The package can be written to operate with either the CP/M or the operating systems provided in the system.

Mixed reactions from industry on first H-P personal machine

THE first personal-size computer from Hewlett-Packard, the HP-85, is eliciting a mixed reaction from potential users, computer retailers and industry observers. Although the machine garnered some initial praise from all concerned camps, the 85 may not be all Hewlett-Packard would like the public to believe, writes Hesh Weiner.

The HP-85 features 16K-bytes of read-write memory, a five-inch black-and-white display, a four-inch printer capable of two 32-character lines per second, a keyboard with a 20-key numeric pad and a wealth of soon-to-be-announced peripheral options. According to the company, the 85 is designed for engineers, scientists and financial professionals.

While HP puts itself on the back for a job it considers well done, a rumbling has arisen among computer retailers, experts and users who are having second thoughts on the 85.

The main source of complaint from users is the current dearth of software for the 85. HP says it will unleash a load of software within the next six months. In the meantime, programming is, as one New York retailer put it, a "do-it-yourself job."

For the most part, users must now depend on local retailers to come up with software applications. This, in turn, has caused some concern among retailers; the retailers themselves often do not have much programming ability. In addition to knowing the mechanics of programming, the software vendors must be familiar with the user's needs. For example, in order to design a financial applications program, the programmer must know, in addition to programming, economic theory and general business practices.

HP says that it is selective in choosing dealers who will carry the 85. According to Carmen West, HP product manager, the company signs deals with only those retailers it believes can offer a sufficiently high level of customer service and support.

To be chosen by HP is an honour, according to West, and none of the retailers HP approached has turned down its

offer to sell the 85. But some retailers say that their enthusiasm for the new machine is now tempered by dissatisfaction with HP's pricing regulations. HP is allowing retailers a 25% profit margin on the 85. The machine's US list price is \$3,250; the retailer's 25% comes to \$812.50. Jim Crimaldi, vice-president of Super Business Machines, a New York City retail store, says "the mark-up is just not enough." Crimaldi adds that "lots of time" is needed for sales assistance to 85 customers. And that, he adds, costs money.

In addition, some retailers have pointed out that the small profit margin prohibits them from discounting the 85 below the suggested list price. Despite complaints from retailers, HP does not seem overly concerned. "We don't feel that the 85's price margin is detrimental to the machine's commercial success," says West.

"Besides," she adds, "the percentage is not the whole story. There is also the reliable, high quality service and support HP offers its dealers."

Profit margins on HP's desk calculators are about 28%. Many retailers feel that this is also insufficient. But these calculators, despite high prices and stiff competition from Texas Instruments products, are not without a group of faithful "HP fans." According to one computer retailer, HP is hoping that the 85 will attract a similar kind of following. "HP has a group of customers who buy anything

the company comes out with," one retailer explains.

Aside from price and other problems, some computer experts wonder if the 85 deserves the attention it is receiving. "The 85 may be impressive today — but it won't be long," says Dale Kutnick, consultants Yankee Group.

He is going to get clobbered by a year or two," he explains. "The 85 is a machine for the same old Japanese, who will have machines for the same old printer, Kutnick says. The computer is "useless for businesses." According to Kutnick, the current standard displays is 60-80 characters per line and 12-24 lines per page. Both measures, he adds, fall short.

Kutnick also doubts the demand of HP's marketing strategy for the 85. "HP is chasing a market that is unlikely to show growth. I think the computer showing short-sightedness," says Kutnick.

Kutnick adds that the machine will only appeal to accountants, engineers and scientists. This market, he will prove to be much smaller than that for HP calculators. Although some retailers they have sold 85s for hours, Kutnick says the machine already overpriced for the price in the home market. "It's just too expensive for the retail, home-use market."

Despite their complaints, dealers do say that interest in the HP-85 is strong.

Make an appointment with London's new Micro Technology Centre

Right in the heart of London, there is a permanent micro exhibition where you can obtain professional advice and buy micro hardware and software.

Some household micro names are on show: Intel, Mosel, Zilog, Apple, Cromemco, North Star, microNova. And other peripheral names too: Anadex, Axiom, Lear, Slegler, Okidata, Printarm, Sanyo, Trenchdom.

This is your invitation to visit the Centre. Unhurried by exhibition crush, discuss your needs in depth, browse the books, arrange training and place your Micro systems order.

Digitus
PS Through Digitus Micro Systems, we provide a comprehensive range of design and programming services.

Computastars moves into Europe for the regional heats

COMPUTASTARS 1980 is now ready to test the skills and energies of the computing industry's sporting enthusiasts, not only in the UK, but also in Holland.

Five regional heats have been arranged: Cleckheaton on April 27; Birmingham on May 4; Barnet on May 10; Arnhem on May 24, and The Hague on June 14.

Winning teams from each region, guest teams from other European countries, with last year's winning teams — the ladies of PMSL and the gentlemen of the London Borough of Lambeth — will compete both for their national titles and the European title of Computastars at the Alexander Stadium, Birmingham, on Saturday September 12.

The principal aim of Computastars remains the same: to find the best all-round teams, although again there will be recognition of individual talents.

To provide flexibility at the regional heats, and also at the final, events may vary. The aim of the variation is to ensure that the teams chosen are of a genuine all-round nature.

As with previous Computastars, the aim is friendly competition based on a wide variety of skills. The attitude of all competitors plays a significant part in the enjoyment of both teams and spectators.

Because the competition will be run in two countries, it has been necessary to cut down the number of heats in England and, in these, entry is limited to one male and/or one female team per unit, as defined in the eligibility rules. Acceptance of teams per region will be limited

to 28 male and 20 female. Once these places have been filled, no further acceptance of teams will be made and applications will be returned.

Should teams wish to indicate an alternative region, they may do so and acceptance will be made subject to first and then second choice availability of places.

Teams that wish to compete outside their own country may do so, but conditions and entry fee appropriate to that country will apply.

The principal support for Computastars 1980 comes from Computer Weekly in England and Computable in Holland, which will report on meetings and publish up-to-date information throughout the competition.

GROUND RULES OF THE COMPETITION

TEAMS will consist of no fewer than three and no more than five people, not mixed male and female.

Each team is required to nominate a No. 1 competitor who will, as well as being a member of the team, compete for the individual title.

The competition will be run in two sections, Ladies and Gentlemen. At least the winning teams (more dependent upon number of entries) from each region will be invited to participate in the National Finals.

Normally the regional heats will consist of a preliminary round and a final to be held on the same day. Neither the events nor the style of the competition (team v team or a knock-out basis or points for excellence of performance (deathon style)) will be published until the day of the competition.

Each team must provide a marshal — not a team member — who may be required to assist in the smooth running of the competition. Failure to provide a marshal for each round in which a team competes will result in penalty points being deducted.

In each event in each round three members of the team will compete, the nominated No. 1 and any two of the remaining team members selected by the team captain.

Should the No. 1 be unable to compete after being nominated — normally two weeks before the regional heats — the team captain will nominate a substitute from the remaining team members. If the substitute for a No. 1 is nominated after the first event of the competition has started then neither the No. 1 nor the substitute is eligible for the individual title.

If the nominated No. 1 is substituted he may not take part for the remainder of the day.

Teams will be allowed to make only one substitution from the nominated team. This substitution must be notified to the organisers on the signing in of the teams on the day of the competition.

Failure to comply with the nomination of teams and the rules of substitution will result in immediate disqualification.

Each round on the day of the competition will normally consist of four events. These will be: 1. A running event any distance up to a maximum of 800 metres per individual, and may include hurdles. 2. A throwing event. 3. A kicking event — any number

of categories which demonstrate foot co-ordination and skill, target shooting, penalties, dribbling, rugby drop kicks, etc. Hockey may be included in this category. 4. Gymnastics.

In any event teams may be required to run the event as a relay. Running order will be at the discretion of the team captain.

The team captain must be a member of the team, and with regard to team selections the organisers will recognise only the team captain's selection.

In the case of a dispute, the team captain and only the team captain will have the responsibility of representing his team. At all times the referee's decision will be final, not subject to appeal.

Who can take part in games

ONLY personnel who are fully charged to data processing departments are eligible to take part in Computastars.

Only personnel who have been employed by their present company prior to February, 1980 can represent that company.

Should a competitor leave the employment of the company which he represents then he will no longer be eligible to represent that company after the date of leaving the company.

Teams may consist of members of a company drawn from different locations.

Standalone computer units of more than 100 personnel shall for the purposes of the competition be regarded as separate companies.

Contract staff may be used subject to the qualifying conditions.

Once a person has been nominated for a specific team he or she may not represent any other team in the competition.

Once a team entry has been accepted there will be no refund of the entry fee.

All costs incurred by teams are the teams' responsibility.

All competitors participate at their own risk and the organisers do not accept any responsibility for any injury or loss of personal or company property. All entries must be signed by the data processing manager or an equivalent authority.

The closing date for entries is March 31, 1980. No entries will be accepted after that date. All entries must be accompanied by an entry fee of £20 per team.

The organisers' decision will be final on all matters concerning the competition.

DOWN, DOWN DOWN

Prices are down in Sintrom's spring sale of Vector Graphic microcomputers. Sintrom, the longest established agents for Vector Graphic in the UK, are offering savings of up to £545 on selected systems for a limited period only.

Vector Graphic MZ

- S100 bus • 56K bytes of RAM • 4 MZ Z80 microprocessors
- 630K twin minifloppy drives • 1 serial 2 parallel ports
- Complete with MDOS/BASIC software

**NORMAL RETAIL PRICE £2645
NOW ONLY £2100**

Sintrom Electronics

Vector Graphic System B

- S100 bus • 56K bytes of RAM • 4 MZ Z80 microprocessors
- 630K twin minifloppy drives
- Mindless terminal VDU memory mapped 24 x 80
- Complete with MDOS/BASIC/CPM (Multiuser option available)

**NORMAL RETAIL PRICE £3200
NOW ONLY £2645**

HURRY

This offer is limited to a total of 100 microcomputers, all of which carry the standard Sintrom 12 month labour and parts warranty. A comprehensive range of commercial software is also readily available.

Gross assemblers

TWO gross assemblers, one for the MOS Technology 6802 and the other for the Motorola 6800, have been launched by micro-software specialist Lifeboat Associates. Each supports the manufacturer's micro-minors and is designed for use with the CP/M operating system, so allowing micro-processor software development to be carried out on a personal computer.

Based on the Vector Graphic

A NEW company specialising in systems based on the Vector Graphic microcomputer system has been started in Crowthorne by Bob Robinson, late of Jormyn and Rapid Recall.

Called R-Squared, the company will be aiming to sell primarily to OEMs operating in the industrial control and small business systems market. To this end, a wide range of languages for the system will be available, including APL, Pascal, Fortran, C, COBOL and Basic, as well as assemblers and editors.

Hard disc system

A 20-MEGABYTE Winchester technology hard disc system has been introduced into this country by Dakstate, for the recently launched Findek portable microcomputer system (CW, January 17).

The disc system is being priced by Dakstate, UK distributor for the Findek machine, at £3,500.

INDIAN SCENE

IN graphic confirmation that India's import regulations and formalities for computer equipment really have been eased, the first Wang VS computer arrived at Bombay's Santa Cruz airport on February 19, and cleared Customs two days later.

Wang, of Lowell, Massachusetts, and its Indian distributor, Datamatics Consultants of Bombay, have struck up a close relationship which extends beyond the sub-continent.

"We are supporting Wang in several African countries," says Datamatics managing director Dr Lalit Kanodia. "In particular we are working in the Ivory Coast, Gambia and Kenya, supporting Wang users and helping to get data services centres started."

"Wang sells mainly through agents in Africa, but also does some direct selling, and we are helping to alleviate the shortage of engineers and software specialists in Africa."

The new Wang VS has joined the IBM 1401, HP 250 and TDC 112 at Datamatics' Bombay bureau. There are still far more

Among the most thrusting and ambitious of the new Indian computer and computer services companies is Datamatics Consultants of Bombay. Under the energetic leadership of

its president, Dr Lalit Kanodia, Datamatics has forged close links with one of the fastest growing companies in the world, Wang Laboratories.

Bombay systems house sets up links with Wang

IBM 1401s, second generation transistor machines, in India than any other type of computer, and the TDC 312 is an Indian designed and built minicomputer similar to the Digital Equipment PDP-8.

To get a Wang VS is a considerable coup for Datamatics since it is probably conceptually the most modern general purpose computer in India. The VS offers the same kinds of innovative programming support and data-base features as the IBM 8100

and System 38 on a machine which has an instruction set almost identical with the IBM 370 set — but whereas the System 38 and the new software for the 8100 are still not available for installation, Wang has been shipping the VS for 18 months and the machine is fully tried and tested.

Most innovative feature of the VS is the screen Cobol, which offers a very high-level command language producing Cobol code, and is so comprehensive

that users claim a 25% reduction in programming time, and IBM users who have also installed a VS are inclined to write their Cobol programs for their 370 on the Wang machine.

"The VS offers the performance of an IBM 370/138 at the price of an IBM System 34, and is also a head-to-head competitor for the System 38," says Dr Kanodia. "It also knocks out the Digital Equipment PDP-11/70 in benchmark."

With the processor, Data-

Report by Tim Palmer

matix has bought three 80-megabyte disc drives, eight VDUs, four tape drives and two line printers.

"For \$150,000 you get a machine equivalent to six IBM 1401s in terms of the work it can process, and the people we seconded to Wang at their Massachusetts headquarters in Lowell have written a program to convert 1401 code to Wang VS code."

Datamatics hopes to have its second VS in about three months, and will also be installing the machine for the US Embassy which is being bought under the US State Department's enormous order, estimated to be worth \$18 million, for 150 VS computers and 500 OIS word processors for installation in US embassies around the world.

Datamatics acquired the Wang VS under Indian government rules which require an importer of a computer to export software to twice the value of the computer.

"We exported software worth almost \$100,000 last year," says Dr Kanodia.

Datamatics has already sold four or five Wang word processors in India to engineering consultancies and legal firms.

Among the applications running at the data centre is an investment model for stock portfolio management on the HP 250.

Datamatics is also collaborating with Rand Corp of San Francisco, doing contract work mainly in the UK.

For the future, Dr Kanodia, planning to offer a high-volume data preparation service to UK and European clients.

"I am thinking in terms of data entry machines and I see we can be competitive in the US, a 100 character per second machine costs between \$15 and \$20."

We could do it for five." Since the aim is to export service, it would be agreed to site the operation in India, the Santa Cruz Electronics Export Processing Zone, where rents and on-the-spot Customs make operating almost for companies manufacturing, providing a service with 100% for export.

Unfortunately it would work in SEEPZ. "The business is so good that we would have to do work for Indian clients well in order to keep the busy," says Dr Kanodia.

He still has his eye on a satellite artificial one. "I thought I was crazy when I talked about having a satellite link to Telenet or some packet-switched service."

"But at the Computer Society of India congress here in month, a satellite link to Prestel system was implemented and worked perfectly through out the conference."

As well as selling the Wang VS business computer, Datamatics is marketing the Wang family of word processors, some of which are also here. Indian litigation is as protracted as in the US, and has been the first to adopt word processors. With few other products available in the Indian market, Datamatics has an almost clear field, which is the US market leader.

Multinationals welcome

FOLLOWING the return of Mr Gandhi's Congress (I) government in India, the climate for large-scale industries and for multinationals which have remained in the country is likely to be more favourable than under the three-year rule of the Janata government. Japan emphasised small-scale and cottage industries at the expense of big business, but Union Finance and Industry Minister R. Venkateshwar has described this policy as wrong in conception and theory.

Meanwhile, the Indian president, Mr Bhabha, told a conference of world market leaders that to increase India's growth rate, the country must encourage some large companies. The Indian government is now looking for foreign investment in the form of joint ventures with multinationals. The Indian government is now looking for foreign investment in the form of joint ventures with multinationals.

KEITH JONES VISITS THE SPECIALIST MICROGRAPHICS SHOW AT WEMBLEY

Micrographics is used more widely in the UK than in any other European country, which is one of the main reasons that the Wembley Conference Centre in London has been the venue for the last few years of a specialist micrographics show, Microforum Europe.

Visitors to Microforum from organisations that use computers often go there in pairs because the head of the user department in a company, such as the financial controller, is usually just as interested in computer output microfilm as the data processing manager himself.

Last week Computer Weekly visited Microforum Europe '80, and here we discuss some of the exhibits.

Lasers in limelight at Microforum 80

LASER technology is pervading many areas of information processing these days, including micrographics. So it was not surprising to find several laser based products at Microforum Europe 80.

Imtec, the UK microfilm equipment group that builds the majority of the products it sells, was showing the MLP-1 computer output microfilm recorder from another manufacturer, Laser Scan of Cambridge.

Imtec, in addition to Laser Scan itself, is now marketing the MLP-1. The main feature of the system is that it can reproduce an intricate drawing on a 35 mm film frame using a unique laser technique.

The MLP-1 is aimed at users prepared to spend about £45,000

on a much faster alternative to a high quality flat bed plotter.

Configured around a 16-bit Texas Instruments 9900 series microprocessor, the MLP-1 uses a laser produced by a helium neon source and controlled by a fast X-Y deflection system to generate drawings in up to two minutes with 256 grey scale levels.

The MLP-1 can be linked to a host computer via RS 232C or 20 mA interface. Software drivers for Digital Equipment PDP-11 and Prime hosts already exist and Laser Scan says that drivers can easily be written for other machines.

Ferranti Cetec at Edinburgh is a Laser Scan customer which incorporates the MLP-1 in the Clumis systems that it supplies

to end users for cartographic and engineering design.

The MLP-1 is one of the products to be sold by the US sales operation now being set up by Imtec with offices at Summerdale, New Jersey. It will be exhibited by Imtec at the National Micrographics Association exhibition in the US next month.

An alphanumeric COM recorder employing laser technology, the Komstar 300, was one of the star exhibits on the Kodak stand.

Komstar can generate 16 mm film or 105 mm microfilm and one of its highest attractions must be that it uses a laser sensitive film that requires no wet chemical processing. This dry technique makes the Komstar

The MLP-1 graphics COM recorder from Laser Scan of Cambridge, was exhibited at Microforum by Imtec which will soon be selling the system in the US. The operator in our picture is loading a reel of 35mm film.

COURSES

DEMAND among engineers for more information about digital control systems has prompted the Institution of Electrical Engineers in England and Wales, the course is aimed at internal auditors and practising accountants. Applications should be sent to the Courses Department, Institute of Chartered Accountants in England and Wales, PO Box 433, Chartered Accountants Hall, Moorgate Place, London EC2P 2BJ.

A short one-week course on technical management is to be held by the Institution of Electrical Engineers in London on April 22-24. The course is aimed at internal auditors and practising accountants. Applications should be sent to the Courses Department, Institute of Chartered Accountants in England and Wales, PO Box 433, Chartered Accountants Hall, Moorgate Place, London EC2P 2BJ.

Portsmouth Polytechnic is to run microprocessor courses from the end of March. The Department of Electrical and Electronic Engineering is to hold courses ranging from first steps in micro to micro programming for directors and managers. Details from Mrs Sizer, Portsmouth Polytechnic, Anglemore Road, Portsmouth.

Compiler writing techniques is the theme of a course to be held by Brunel University, and aims to give the student a detailed introduction

to the algorithms and techniques used in compiler writing. The course will cover language, table handling, hash tables, syntax analysis, simple code generation and storage and register allocation. It is organised by the Computer Science Department, further details can be obtained from R. Saunders, Industrial Services Bureau, Brunel University, Uxbridge, Middlesex. Tel: Uxbridge 39224.

A series of three-day courses entitled Design of Microprocessor Based Systems is currently being held by Prodes (Sunderland). Day 1 is entitled Microprocessor systems: the fundamental concepts; Day 2 Design, development and understanding the complete system; and Day 3 Micro software — understanding and managing its production and maintenance. The course finishes in London on April 22-24. The cost is £25 and details can be obtained from Prodes, 79 High Street, Tunbridge Wells, Kent. Tel: 0892 88884.

much more like a proper electronic computer peripheral than older types of COM recorder. The Komstar is a standalone unit with its own controller.

A COM recorder designed specifically for online operation with an IBM mainframe was a product that NCR salesmen on the company's Microforum stand were ready and willing to discuss even though it was not on show. The 643-1020 recorder has not yet been formally launched in the UK but, said NCR, units can be shipped to customers who want the machine.

The 643-1020 can produce titled, indexed, cut and dried microfilm from print files or directly from Sysout data streams.

Software developed by NCR interfaces with the DOS, DOS/V and OS/HASP/JES spooling systems. The 1020 itself incorporates a 16K-byte buffer "that can store a complete page of data and the data throughput varies from 50K to 500K characters per second depending on the channel."

For most potential COM users an in-house machine cannot be cost justified so they have to go to one of the collection of COM bureaux dotted around the country. Harlow, Essex, is the location of RHM CentreCOM, one of a handful of COM bureaux that appeared at Wembley.

RHM CentreCOM was talking about the new graphics service based on its 3M BetaCOM recorder at Harlow. Like the Laser Scan MLP-1, the BetaCOM films on to 35 mm frames

but it uses the more conventional CRT and stroke vector technique for generating the drawings. RHM said that tapes formatted for Calcomp 800 series plotters could be run on the BetaCOM without any changes.

For commercial applications, alphanumeric data and simple graphics like bar charts can be mixed by the BetaCOM on the same microfilm and even on the same frame at reductions of 42 or 48 times.

The same can also be achieved at 24K reduction on 111 mm roll film. If required a dozen or so 35 mm frames can be created on the same 105 mm fiche at reductions of 9 or 12 times.

RHM pointed out that only about 10% of its COM work is carried out for its parent company, Rank Hovis McDougall, but said that there were close ties with the parent's mainframe bureau, RHM Computing.

The RHM CentreCOM bureau — or studio as the company prefers to call it — is also big in micropublishing and is keen to point out that its BetaCOM system can generate a shortened version of the Chinese character set and the diacritics in the Serbo-Croat and other alphabets. It can also handle proportional spacing.

Eurocom Data, the COM bureau group owned by National Westminster Bank, was talking to visitors about new facilities like the 6,250 bpi tape drive now linked to its recorders at its Rickmansworth, Herts, centre and the fact that Eurocom can now generate COM from data on floppy discs.

Packaged accounting system based on Commodore Pet

A £4,000 packaged system aimed at providing small business users with a complete hardware and software configuration has been put together by the London-based microcomputer dealer Lion Microcomputers.

The package is based on the ubiquitous Commodore Pet, in this case a 32K-byte version, which comes with Commodore's dual-disc drive and printer. The software comes from two separate sources, Radix Computer Services, and Patsoft.

The Radix Accounting System software is being supplied exclusively for the Lion package, and is intended for users with only a basic knowledge of book-

keeping. It can handle all ledger accounting, according to Lion, by recording information on to "books" of prime entry, and then automatically updating the appropriate ledgers.

It is capable of handling 300 sales accounts, 300 purchase accounts and 90 nominal accounts, with up to 2,500 entries a month.

To round off the package, Lion also includes the Petsoft Stock Control System. It does not, however, link directly with the Radix software.

The Radix package can be purchased separately for £1,200 plus VAT. The total system price of £4,000 includes tax.

In its Third Year, back at the

INDIAN SCENE

IN graphic confirmation that India's import regulations and formalities for computer equipment really have been eased, the first Wang VS computer arrived at Bombay's Santo Cruz airport on February 19, and cleared Customs two days later.

Wang, of Lowell, Massachusetts, and its Indian distributor, Datamatics Consultants of Bombay, have struck up a close relationship which extends beyond the sub-continent.

"We are supporting Wang in several African countries," says Datamatics managing director Dr Lalit Kanodia. "In particular we are working in the Ivory Coast, Gambia and Kenya, supporting Wang users and helping to get data services centres started."

"Wang sells mainly through agents in Africa, but also does some direct selling, and we are helping to alleviate the shortage of engineers and software specialists in Africa."

The new Wang VS has joined the IBM 1401, HP 250 and TDC 312 at Datamatics' Bombay bureau. There are still far more

Among the most thrusting and ambitious of the new Indian computer and computer services companies is Datamatics Consultants of Bombay. Under the energetic leadership of

its president, Dr Lalit Kanodia, Datamatics has forged close links with one of the fastest growing companies in the world, Wang Laboratories.

Bombay systems house sets up links with Wang

IBM 1401s, second generation transistor machines, in India than any other type of computer, and the TDC 312 is an Indian designed and built minicomputer similar to the Digital Equipment PDP-8.

To get a Wang VS is a considerable coup for Datamatics since it is probably conceptually the most modern general purpose computer in India. The VS offers the same kinds of innovative programming support and database features as the IBM 8100

and System 38 on a machine which has an instruction set almost identical with the IBM 370 set — but whereas the System 38 and the new software for the 8100 are still not available for installation, Wang has been shipping the VS for 18 months and the machine is fully tried and tested.

Most innovative feature of the VS is the screen Cobol, which offers a very high-level command language producing Cobol code, and is so comprehensive

that users claim a 25% reduction in programming time, and IBM users who have also installed a VS are inclined to write their Cobol programs for their 370 on the Wang machine.

"The VS offers the performance of an IBM 370/138 at the price of an IBM System 34, and is also a head-to-head competitor for the System 38," says Dr Kanodia. "It also knocks out the Digital Equipment PDP-11/70 in benchmarks."

With the processor, Data-

Report by Tim Palmer

metics has bought three 80-megabyte disc drives, eight VDUs, four tape drives and two line printers.

"For \$150,000 you get a machine equivalent to six IBM 1401s in terms of the work it can process, and the people we seconded to Wang at their Massachusetts headquarters in Lowell have written a program to convert 1401 code to Wang VS code."

Datamatics hopes to have its second VS in about three months, and will also be installing the machine for the US Embassy which is being bought under the US State Department's enormous order, estimated to be worth \$18 million, for 150 VS computers and 500 OIS word processors for installation in US embassies around the world.

Datamatics acquired the Wang VS under Indian government rules which require an importer of a computer to export software to twice the value of the computer.

"We exported software worth almost \$100,000 last year," says Dr Kanodia.

Datamatics has already sold four or five Wang word processors in India to engineering consultancies and legal firms.

Among the applications running at the data centre is an investment model for stock portfolio management on the HP 250.

Datamatics is also collaborating with Rand Corp of San Francisco, doing contract work mainly in the UK.

For the future, Dr Kanodia is planning to offer a high value data preparation service to UK and European clients.

"I am thinking in terms of data entry machines and to ensure we can be competitive in the US, a 100 character machine costs between 15 and 20 cents. We could do it for five."

Since the aim is to export service, it would be appropriate to site the operation in SEZs, the Santa Cruz Electronic Exports Processing Zone, which offers low rents and on-the-spot customs make operating simpler, for companies manufacturing providing a service which is 100% for export.

Unfortunately it would not work in SEZs. "The business is so small that we would have to be doing work for Indian clients well in order to keep the business," says Dr Kanodia.

He still has his eye on an ambitious artificial one. "I thought I was crazy when I talked about having a satellite link to Telenor or some packet-switched service."

"But at the Computer Society of India congress here last month, a satellite link to Prestel system was implemented and worked perfectly through the conference."

As well as selling the Wang VS business computer, Datamatics is marketing the Wang family of word processors, some of which are also sold in India. Indian litigation is as protracted as in the US, and countries, members of the Indian legal profession have been keen to adopt word processors. With few other products, Datamatics is the US market leader.

Multinationals welcome

FOLLOWING the return of Mrs Gandhi's Congress (I) government in India, the climate for large-scale industries and for multinationals which have remained in the country is likely to be more favourable than under the three-year rule of the Janata government. Japan emphasized small-scale and cottage industries at the expense of the big business, but Union Finance and Industry Minister R Venkatarman has described this policy as wrong in conception and theory.

Meanwhile, the Indian president, M. Hidayatullah, told a conference that to increase world market India must adopt a more open policy. The new government, which is likely to be more pro-multinationals, will be a boon for the Indian computer industry.

KEITH JONES VISITS THE SPECIALIST MICROGRAPHICS SHOW AT WEMBLEY

Micrographics is used more widely in the UK than in any other European country, which is one of the main reasons that the Wembley Conference Centre in London has been the venue for the last few years of a specialist micrographics show, Microforum Europe.

Lack of hard currency slows West's efforts

WESTERN companies are gradually giving up trying to sell computer equipment in Eastern Europe because of the lack of hard currency there and the continuing growth of the local industry, even though the Eastern European products are not as technologically advanced as those from the West.

This was clear at the Leipzig Fair in East Germany last week, where earlier exhibitors like IBM, Digital Equipment, Olivetti and NCR were once again missing and those companies which did turn up spoke of long discussions but little business. In addition, the attitudes of those companies had hardened.

There was no longer a willingness to barter for business and accept goods in return for computer equipment. Nor were the exhibitors looking to license the manufacture of their products in Eastern Europe.

One company there in strength was the West German business systems firm Triumph-Adler, through its Berlin agent, Horn und Görwitz, whose star exhibit was the Alphatronic microcomputer (CW, February 21).

The system is going well: Horn und Görwitz said it had sold 20 in West Berlin without promoting it and was negotiating the sale of "a couple of systems" in East Germany, despite the launching of another microcomputer by the East German computer organisation, Robotron, at Leipzig.

At present the Alphatronic has a Basic Interpreter. A compiler is planned and Pascal is due to be added in the autumn. Applications packages are also being looked at for small businesses such as firms of solicitors and accountants.

Triumph-Adler's TA20 accounting system was also on show. Horn und Görwitz said it was suitable for the East German market because it fitted in below the smallest Robotron system. The SE2000 word pro-

cessor, with a 4K memory and single minifloppy disc, was also there.

Elsewhere there were few computers to be seen. Hewlett-Packard had its 9835 desk top computer on show and another Leipzig Fair regular, Philips, showed the Four Phase Systems key-to-disc system, now sold under Philips' P7000 label.

After a lot of interest last year and sales of four systems to Kombinat Fortschritt, the East German agricultural equipment manufacturer, Philips reported no interest at all this year.

"There is the Robotron 4230 but its terminals are linked through a concentrator so it's not a real time system and there's little software," said Philips' data systems sales manager for East Germany, Jürgen Greiner.

"They say there's something more sophisticated coming — but that probably means in four years' time. And if they think they have their own systems available locally they won't buy anyone else's," he added.

Greiner felt, however, that if more hard currency was available in Eastern Europe, end users would go to firms like Philips for their systems rather than to local organisations.

On the idea of taking goods instead of money Greiner said that could be acceptable to Philips but Eastern European countries could not guarantee to stick to delivery schedules.

Philips' main effort at Leipzig went to promoting industrial equipment, including process control systems.

If the computer market was closed to the West there was optimism about the opportunities in facsimile equipment. The latest system in Kalle Infotec's range, the 6000/450, was awarded a Leipzig Fair gold medal and the firm had signed the stand announcing that it was the official supplier of facsimile machines to the Moscow Olympics later this year.

Manfred Schuster, from Kalle's International sales section, said no facsimile equipment was made in East Germany but there was tremendous interest in it.

The company had shown its machines three times at the Leipzig Fair and was just starting to do business; one showpiece was a network set up between East Berlin, Leipzig and Dresden by the party newspaper Neues Deutschland for sending typescript from office to office. The Soviet news agency Tass was also very interested.

Schuster said there were signs that communications lines were improving, at least in places: the Neues Deutschland network was working well at a transmission rate of 4,800 bits per second.

An East German user confirmed that the improvements were only here and there: his organisation could only run terminals at 2,400 bits per second.

He said the Neues Deutschland network was using private lines. Another firm testing the facsimile market was Toshiba, which, with Hitachi, offered a small Japanese presence. It reported a lot of interest in facsimile equipment and felt East Germany was ready for it.

Hitachi's small stand offered colour television screens and a diagram of an 8-bit microcomputer. The stand was not manned, however, and a sad pencil notice saying "no brochures" was the only other adornment.

A profusion of microfilm readers, paper handling equipment and copiers made up for the lack of computers from the West. A. B. Dick, which had a sign up announcing that it was now a subsidiary of GEC, showed all types of copier.

Wolfgang Schmitz, a technical specialist with the company, said copiers were supplied to Eastern Europe by the Soviet Union but they needed developer and toner and were not plain paper units; hence the interest in copiers from the West.

Schmitz said A. B. Dick was not exhibiting word processors because the market was restricted by the fact that they were built in Hungary, Poland and East Germany. The company had shown microfilm equipment last year but found it was too expensive for the Eastern European market.

Firma which disagreed included Kalle Infotec, AM International and the Bell and Howell agent, Mikrofilm-Center Klein. This company pointed out that, although Robotron had been making microfilm systems since 1976, it still lacked some types of equipment such as reader-printers and portable fiche readers.

Paper handling equipment from the West was popular, according to Pitney Bowes, because the East Germans had failed to make satisfactory machines.

Another firm showing this type of equipment, Fima, from Italy, which is a regular exhibitor at the Leipzig Fair, said it had sold "hundreds" of machines to Robotron. The East German organisation then re-sold them under its own label.

Fima did well in the Comecon countries because its equipment was sold there by a West German engineering company, Techint, which was happy to accept heavy engineering equipment as payment. Techint then paid Fima in cash.

Companies maintaining low profiles at Leipzig included Centronics, which was there under the banner of a Vienna firm, International Electronics, which also represents Intel.

The company reported great interest from end users in the Centronics 730 terminal printer, which runs at 100 characters a second.

By comparison, the East German organisation RFT's latest terminal printer had a label which said it ran at 800 characters a minute.

All roads lead to the trade fair at Leipzig, where some exhibitors have the shadow of the old town hall (right) and others are on the high grounds outside the city.

ABOVE — despite the emphasis on microcomputers on the Robotron stand, the IBM-compatible 1085 minifloppy attracted the most interest. This operator was controlling a 1-megabyte system with new 5.25-inch floppy disc drives from Bulgaria.

BELOW — "The modular concept" was part of the distributed processing theme of Robotron's stand. One of the modules was this new 2401 reservation terminal which was linked to a 4201 system in Dresden. A 120 hotels in the Sofia area.

'16-bit' micro is the star on Robotron's stand

The highlight of the Robotron stand was the K1800 microprocessor. The "16-bit" micro is arranged as two eight-bit processor chips. In the rack on the right it is in the top section. Underneath are a cassette tape unit and paper tape device from Robotron and two 5-megabyte cartridge disc drives from Bulgaria.

A MICROCOMPUTER with 16K-bit memory chips, a daisy wheel printer and an electronic telephone exchange system were the highlights of East German stands at the Leipzig Fair last week.

And distributed processing was featured through new data capture devices and specialised terminals.

The K1800 microcomputer, from the manufacturing organisation Robotron, was launched as a 16-bit processor. But this device was split between two new 8-bit chips labelled U83a and made by the microelectronics concern Kombinat Mikroelektronik.

Dr Horst Giebler, director of research and development at Robotron, said the issue of whether East Germany had a 16-bit processor chip was not important, "it depends on your approach," he said, "it depends on whether you want a fixed instruction set or the flexibility of the 8-bit device."

The model on show was the smallest and only model produced so far, the K1620, which has a maximum memory of 32K-words. Robotron said the memories included new 16K-bit

chips, although Kombinat Mikroelektronik had only 8K-bit chips on show.

Peripherals attached to the K1820 included floppy disc drives from Hungary and 5-megabyte cartridge disc units from Bulgaria. The K1800 can communicate with the Comecon countries' unified range of general-purpose computers.

Dr Giebler said Fortran was available on the K1820 and that Pascal and Basic were under development. Software was available for general data processing, data acquisition, process control and laboratory applications.

Future models will include the K1630, with up to 128K of memory, and the K1610, which will be aimed at the OEM market. Robotron has its eye on the West for this product.

The K1800, the 8-bit K1520, launched last year, and the earlier K1510, were built into Robotron's latest offerings in the small business systems and distributed processing areas.

These included the A5103 accounting system, with the new 1152 daisy wheel printer, which runs at 30 characters per

second. The printer, too, is being offered to the world OEM market. The A5103 can have up to 36K-bytes of memory, two floppy disc drives and two cassette tape units.

New data capture devices included the programmable A5201, available with floppy discs and cassette tapes, and the K8227 reservations terminal aimed at the hotel and travel trades.

It has built-in floppy discs and can have up to 54K-bytes of memory and a choice of printers.

On the stand it was shown communicating with a Robotron 4201 small computer in Dresden at 2,400 bits a second. It can also link to the unified series computers. Robotron has sold a nine-terminal system to Sofia. It is pictured on the opposite page.

The daisy wheel printer was also in the S6001 electronic typewriter, which was making its Leipzig debut after its launch at the Hannover Fair last year.

This device uses Kombinat Mikroelektronik's U880 8-bit microprocessor chip, which is compatible with the Zilog Z80, and has 4K of memory for storing text and layout information on things like margins and spacing.

Dr Frank Seiffert, deputy director-general of Robotron's foreign trade section, said the electronic typewriter could bring big business for Robotron in countries where the organisation is already strong in the typewriter market.

The new Robotron terminals, business systems and typewriters — based on chip memories and processors and using floppy discs as storage devices — have taken over from the older systems based on paper tape and magnetic tape and made by the Daro organisation.

Daro merged with Robotron last year, making Robotron the sole East German supplier of office systems and computers, from manual typewriters and

drawing office equipment up to mainframe computers.

Robotron now has 70,000 staff, including 9,000 in research and development. It is looking to expand its office product range further with the addition of copiers while, on the microcomputer front, it is working on handwritten input.

The emphasis on microcomputers detracted from the system at the other end of the computing scale, the 1055, Robotron's contribution to the latest unified range from the Comecon countries, the ES series.

The 1055 was shown at the Leipzig Fair for the first time in 1978 but only went into production last year. It is the biggest machine in the unified range and falls between an IBM 370/148 and 158.

Like the first ES series, the second is compatible with IBM's 370 systems. The 1055 has a cycle time of 1,140 nanoseconds. It can have 1 or 2 megabytes of memory. A database management system is available.

A recent advance has been the introduction of 100-megabyte disc units, two of which were linked to the 1055 on the Robotron stand. They are made by the Soviet Union and Bulgaria.

Formerly the biggest disc available was a 20-megabyte unit from Bulgaria.

However, the big East German government data processing organisation, Kombinat Datenverarbeitung, formerly Maschinelles Rechnen, has not been able to install any 100 megabyte disc drives yet and a Soviet Union representative at Leipzig said none had been exported from his country. Nevertheless, he expected 200 megabyte discs to be available late next year.

The weakness of Eastern European disc units in particular has led Robotron to look to the West, especially to Control Data, for peripherals.

Control Data bought a Robotron 1040 from the first unified range five years ago (CW, April 17, 1975) and gave good reports of the system. Three years later Robotron and Control Data signed an agreement which involved the East German organisation selling systems to the Third World and Control Data supplying peripherals "where appropriate".

The agreement has not brought business, however. Last week at Leipzig Dr Uwe Wulf, deputy director-general of Robotron, said: "We have not made much progress with this deal. We must discuss it further, perhaps with other partners."

Despite this setback, Robotron has sold some 1600 systems to India, Iraq and Cuba.

The agreement has not brought business, however. Last week at Leipzig Dr Uwe Wulf, deputy director-general of Robotron, said: "We have not made much progress with this deal. We must discuss it further, perhaps with other partners."

Despite this setback, Robotron has sold some 1600 systems to India, Iraq and Cuba.

DP staff shortage but...

THE shortage of programmers experienced in the US and Western Europe is also a problem in East Germany but the way industry is organised there makes the problem much less acute, according to Dr Frank Seiffert, deputy director-general of Robotron's foreign trade section.

"Our industry is organised into huge combines — one for agricultural equipment, one for computers and so on," he said. "For every industry there's an institute and part of the work of these institutes is to develop software for their industries."

"We sell this software as packages, which we can adapt as necessary: in fact this facility helped us to win the order from the State Building Works in Iraq."

An unusual office product from Robotron was the Erika 500 Braille typewriter. It was launched at last year's Leipzig Fair, when it won a gold medal. Erika is also the brand name of typewriters sold in the West by Robotron.

Databasesolve

Communications skills

How well do you communicate?

Whatever career progress you are making it's only as good as your ability to communicate with others.

Databasesolve's personal development courses will give you the skills to write and speak more effectively, and be a better communicator.

We'll give you the benefit of years of experience and knowledge, and whether you're just starting out on your career or seeking to polish already established professional skills we'll give you the means to handle your day to day work more effectively.

As classes are small you will make progress quickly and if you're not sure if you'll find it hard to follow after you'll find hard to follow.

To book or obtain more details either telephone Mike Gough on 01-828 8104 or complete and return the coupon below.

01-439 1563

Norway was the homeland of the forefathers of at least two giants of the US computer industry, Kenneth Olsen, president of Digital Equipment, and Gene Amdahl, architect of the IBM 360 series and founder of the first manufacturer of big software compatible processors.

Norwegians have achieved a great deal outside their country, but there is still plenty of talent left at home, even though computer firms in Norway suffer from the drawback of

having a very small domestic market. The biggest Norwegian-owned computer manufacturer is Norsk Data, a firm which now covers most of Europe and even has a presence in the US. But several other computer firms based in Norway could make much more of an impact in the future in the UK and other overseas markets.

On these two pages Keith Jones (left) discusses three of them: Ican, Mycron and Tandberg Data.

Oslo firm set to rival the major CAD manufacturers

ICAN is a Norwegian company virtually unknown outside Scandinavia, apart from among those who are in close contact with the world of computer-aided design — CAD for short. The company was founded only two years ago and its workforce

currently stands at a grand total of 15.

But Ican's financial and technical backing looks strong enough to make the company a serious potential competitor for bigger and more established CAD systems manufacturers.

Financial backing comes from the Norsk Credit Bank and also in the form of an 8% loan from the Norwegian government which Ican only has to pay back when it becomes profitable. If Ican crashes the company's eight shareholders get out of

having to pay back the money still — although they would be unlikely to get anything out of the government in the future for any new venture. In addition to this loan, which was provided by the government's board for Industrial

growth and adaptation, Ican was also helped by a no-strings grant from the Royal Norwegian Council for Scientific and Industrial Research.

Technical support comes from several Norwegian institutions including Norway's technical university at Trondheim where several Ican personnel were working before they joined the company.

There are close ties, too, with the top Norwegian-owned computer manufacturer, Norsk Data, which holds a 7% share in Ican.

Norsk Data is also a prospective user of Ican systems and its Nord minicomputers are likely to be used to host some of the applications software being developed by Ican.

Ican's president, Kolbjorn Johannsen, was one of the founders of Norsk Data in the late 1960s and left Norsk Data about two years ago to set up Ican. Johannsen estimates that Ican has 100 potential customers in Norway, Sweden and Denmark, including 30 prospects.

Ican is also being helped to get off the ground by two major Norwegian companies which are providing Ican with its first installations. One is Sinrad A/S, a firm with a workforce of 600 which builds sonar equipment for detecting fish, among other equipment. The other firm, and much better known outside Scandinavia, is Kongsberg, the £150 million-turnover Norwegian engineering group.

According to Kolbjorn Johannsen, Kongsberg is interested in installing four Ican systems and its requirements include an interface for the Digital Equipment PDP-11/70 and software for manipulating three-dimensional mechanical graphics. The software will be backed up by an arithmetic floating point processor now under development at Ican which will speed up co-ordinate calculation by up to 50 times. The processor will be micro-programmable for optimum performance and will employ the AMD 2903 bit-slice chip set. It will provide a 32-bit floating point format similar to that on

Tandberg Data built a cluster system based on the screens like the one shown. Tandberg supplies the system on OEM basis to customers. Ican's basic system includes Siemens, which is 81% of the Oslo-based firm. Ican uses the Tandberg Data base of a small general purpose commercial system called 6.610.

The 16-bit DEC machine. Existing Ican hardware includes two special processors employing the AMD slice set. They are a memory controller with addressing and a 12-bit processor for generating rotators and handling coordinates.

The basic Ican driving software, Tiger, is a Digital Equipment Corporation under RT-11. The 11/22 is the rule of a controller. Ican workstation consists of a host such as a DEC or Data machine and a support stand-alone queue-running the applications were as well as Tiger.

One application, already available is Ican Computer Aided System, which enables a user to manipulate data in two dimensions. The user can call up the elements of the program from a library of icons and move them on a tablet which also commands the system.

Tiger can also interface high-level graphics packages like Gino-F and GPC-F. Ican was developed at Trondheim Technical University and used widely in Scandinavia, according to GPC-F is said to be more active than Gino-F.

Ican workstations are mounted all come with a vector display which is used for line drawings. While the electron beam, the phosphor on the screen.

A new feature being introduced later this year is a display employing the technique of vacuum fluorescent tubes at laboratory of vacancy files at the Norwegian government, suggesting that it is being supported by the Norwegian government. Mycron points out that the government has a computer equipment acquisition policy as far as in any case it is about to introduce accounting software that will spearhead a marketing offensive in the private sector.

A Mycro-3 with 64K-bytes of main memory, dual floppy disc drives and one VDU costs about £10,000 complete with software that can include Pascal, Fortran, Basic and PL/M, which is compatible with Intel's PL/M. Options include emulators for the IBM 3270 and 3780 terminals and a communications processor for local.

Germans move in with policy of controlled growth

WHEN the Norwegian government took over the whole of the Tandberg organisation in 1978 the company was in a bad way, mainly because half its £80 million-plus turnover was still coming from the unprofitable business of selling domestic colour televisions in a market that was saturated. People were surprised and some suppliers were angered when the government subsequently let the company go bankrupt.

Today the television part of Tandberg is more or less dead while the language laboratory side of the company is owned by the top Norwegian computer manufacturer Norsk Data operating as an autonomous subsidiary.

The computer equipment side of Tandberg, a mid-1970s spin-off of the firm's TV and tape recording activities, was also worth saving, especially for Siemens which was by far its biggest customer.

Soln March last year the West German electrical and electronics giant took a 51% controlling interest in what is now Tandberg Data, while the Norwegian government retained the remaining 49%.

Controlled growth with sales expansion, and hence costs kept in check, is the policy being followed in Tandberg Data's first full year under Siemens ownership which ends in October. The aim is to make a profit on a turnover of about £10 million compared with about £9 million in the previous year. Profitability is regarded as essential for the new company to achieve credibility.

More than 40% of Tandberg Data's output is still being taken by Siemens and this degree of interdependence is expected to persist for another year at least. The company's UK distributor, Farnell Instruments, has done quite a lot of business with the TDC 3000 cartridge tape drive supplying customers like Ferranti in Edinburgh, and the Post Office which uses the 3000 in System X development work. The Swedish telecoms giant, L. M. Ericsson, is by far the biggest customer for the 3000. But VDU products, which now account for 85% of Tandberg Data's turnover, have not sold well in the UK mainly because they are too expensive for most UK customers.

Farnell hopes that new VDU models unveiled at Hannover Fair this year will be priced more attractively.

But Tandberg says that its existing Teletype compatible VDU, the TDV 2115, is the last low-cost display to be built by

the company and that it is now concentrating on more sophisticated VDU products. The TDV 2114 master VDU, for example, incorporated the Intel 8080 microprocessor and can control up to seven slave VDUs in a cluster called the 803X in its OEM form.

The digit substituted for the X in 803X depends on the main-frame terminal that can be emulated. It could be an IBM 3270 or Honeywell VIP. The slave VDUs can be TDV 2115 units or TDV 2116 editing VDUs.

The 803X is sold by the Siemens Basic Information Systems division as the 6.610 small commercial system. Siemens has written a wide range of application software for the system while Tandberg provided the basic 803X software like the

disc operating system, TOS 21, a commercial Basic Interpreter and Cobol. The latter is CIS Cobol for Micro Focus. Tandberg also sells a much bigger system called the TDS 8010 which is configured around a Philips P800 series minicomputer and which can support up

to 23 slave VDUs. Tandberg's workforce currently stands at about 250 and the company is shipping TDV 2114 masters at a rate of about 1,500 a year. Shipments of the 2115 and 2116 are running at 2,500 and 1,000 a year respectively.

Oslo, as seen from the harbour. On the right is the windjammer Christian Radich, and on the left the veteran steamship Boroyund.

Akershus Castle and Fortress, Oslo, one of the landmarks of Norway's capital.

Multiprocessor this year based on Intel 8086

A MULTIPROCESSOR system employing the 16-bit Intel 8086 microprocessor is to be launched later this year by Mycron. This Oslo-based firm started off by attacking the process control market, but has now decided to concentrate on the commercial sector.

Mycron moved out of process control because of fierce competition from low-cost US process control equipment and this decision led to the termination at the end of 1979 of its agreement with its UK distributor Euro Electronic Instruments.

The main hardware offering at the moment is the Mycro-3, a system configured around a single CPU employing the Zilog Z80.

Mycro-3 systems are now being supplied to the Norwegian government for various non-technical type applications, including the maintenance of vacancy files at the Norwegian government, suggesting that it is being supported by the Norwegian government. Mycron points out that the government has a computer equipment acquisition policy as far as in any case it is about to introduce accounting software that will spearhead a marketing offensive in the private sector.

A Mycro-3 with 64K-bytes of main memory, dual floppy disc drives and one VDU costs about £10,000 complete with software that can include Pascal, Fortran, Basic and PL/M, which is compatible with Intel's PL/M. Options include emulators for the IBM 3270 and 3780 terminals and a communications processor for local.

The multiprocessor system employing the Intel 8086 will probably be called the Mycro-10 and will run under MP/M, the multi-user version of Digital Research's CP/M operating system. Languages to be supported will definitely include Pascal and probably also PL/Mycro, but no decision has been made yet on Basic or Fortran. MP/M will provide the opportunity for other languages to be supported.

An OEM version of the Mycro-10 with MP/M and Pascal should be available for delivery at the end of 1980, and next year applications packages should be ready for accounting, word processing and data entry.

The most interesting hardware feature of the Mycro-10 is what Mycron calls the high-level bus which can connect up to four complete single card machines making inter-machine file access possible, but not high volume file transfers. Each machine includes an 8086 CPU, an 8K Epprom, 128K-bytes of RAM with parity and six serial and two parallel I/O channels.

All these components are hung on to an internal bus which in turn is connected to the high-level bus. The internal bus can also be extended to an add-on memory card that takes the maximum memory size up to 512K-bytes. Thus the biggest Mycro-10 will have eight cards and up to two megabytes of main memory.

Hard disc storage will come in the form of Winchester drives with integral controllers that will eliminate the need for a separate controller card. Each machine will run its own copy of MP/M.

Now you can be a software expert in 3,223 easy lessons

New guide to world's top programs

Computer User's Year Book introduces a revolutionary advance in software knowledge.

The new International Directory of Software 1980-81 describes 3,223 independent software products covering almost every conceivable computing function.

These products are the result of millions of hours of systems development. They are available to you now without the need for additional hardware investment.

In the Directory each entry is indexed at least three ways, leading you straight to those products which meet your needs and will run on your computer.

Products are listed under 107 classifications of systems and applications softwares. The table below shows the main groupings and the number of products listed in each group.

SOFTWARE GROUP	NUMBER OF PRODUCTS
ACCOUNTING	111
ADMINISTRATIVE	65
ANALYTICAL	273
ARTS	213
BIOMEDICAL	223
BUSINESS	107
COMMUNICATIONS	148
CONSTRUCTION	1356
EDUCATION	109
ENGINEERING	77
FINANCIAL	405
GENERAL PURPOSE	135

Before you spend another penny on machines or manpower, take a close look at this portfolio of world software. For only £36, you could find instant solutions to your operations or applications problems.

The International Directory of Software is available now for immediate delivery. Order your copy today by completing the coupon below.

THE NEWSPAPER COMPUTER PEOPLE RELY ON

Appointments

Technical Support Analyst

West London/
Berkshire To £9000
+ Benefits

Our client is a highly successful multi-national company which utilises IBM mainframes, together with mini-computers in a variety of configurations throughout the world. The company is seeking a Technical Support Analyst to further strengthen the support service provided at one of their major computer centres.

Key responsibilities will include

- Advice to computer centre users on efficient use of hardware and software resources.
- Monitoring and evaluation of technological advances.
- Assistance to users in the solution of complex technical problems.
- Liaison with other computer centres, both within and external to the company.

Ideally, the successful candidate will:

- Have an in-depth working knowledge of IBM OS software.
- Preferably have some knowledge of teleprocessing and time sharing services.
- Be able to demonstrate flexibility, initiative and self-motivation in a demanding environment.
- Be skilled in communication with technical and non-technical staff.

This position offers:

- An outstanding opportunity to gain valuable experience on a wide variety of configurations.
- Numerous and varied career paths in a company dedicated to staying at the forefront of technology.
- Excellent salaries and benefits including, where necessary, relocation expenses.

To apply for this exciting position, telephone Andy Cousins, quoting Ref. AC 2998.

DP Professionals for Management Consultancy

Up to £12,500

Our clients are expanding their data processing capabilities with a new project starting up in the MANCHESTER/LIVERPOOL/NORTH WEST area. TEAM LEADERS, SYSTEMS DESIGNERS and SENIOR PROGRAMMERS are required on a permanent basis to take on responsible positions.

As Consultants, their work includes most aspects of data processing from application design through to systems software. Generally their work involves solving problems with multi-discipline teams, where opportunities exist for broadening or increasing your depth of knowledge.

They can offer interesting and varied work where personal fulfilment can be achieved whilst improving your professional status.

On completion of this project, they can offer considerable opportunities both in the UK and overseas. Salaries are fully negotiable, depending on age and experience.

Interviews will be held locally over the next fortnight - to arrange a meeting, please ring James Wakefield on 01-486 5555, or write to him at Abbey National Building Society, 27 Baker Street, London W1.

'Get the Abbey Habit' in London NW1

The Abbey National Building Society continues to be in the forefront in its use of data processing for all its operations.

The Society currently supports a Real-Time System for its extensive branch network which is based on a Univac 1100/81 central computer with Creed 2300 branch terminals.

To further improve its customer service and operational efficiency the Society will shortly embark on a major redevelopment of this system involving the introduction of advanced terminal and telecommunications equipment.

To assist in this major undertaking we are seeking the following data processing professionals:

Systems Analysts

(SALARY UP TO £9,000 p.a.) and benefits including preferential mortgage terms

This is a unique opportunity to join a young and dynamic Systems Department and progress your career in the areas of Real-Time, advanced terminals and database applications. Ideally you should be a graduate, under 30, and have at least 2 YEARS SYSTEMS ANALYSIS experience preferably in a financial environment.

Essential personal qualities include a sound business acumen, good communicative skills, and above all the drive and stamina necessary to implement projects within tight deadlines.

Systems Programmers

(SALARY UP TO £9,000 p.a.) and benefits including preferential mortgage terms

The successful applicants will have a challenging role at the heart of our Central site developments which will encompass major changes to our communication processing and Real-Time applications.

As such the applicants must be highly self-motivated and should possess at least 2 YEARS UNIVAC ASSEMBLER PROGRAMMING EXPERIENCE and a sound knowledge of UNIVAC Job Control language.

Some practical knowledge of one or more of the following would be advantageous:

1. Communications—CMS; TIP; TELCON
2. Database—DMS 1100; RPS; QLP
3. Operating System—OS 1100/EXEC 8.

Application Programmers

(SALARY UP TO £8,000 p.a.) and benefits including preferential mortgage terms

The successful applicants should have a sound education, be preferably under 30 and possess the character and ambition to progress their career rapidly.

The work is challenging and offers rewarding prospects for those applicants who show the aptitude and flair for involvement in all stages of project development.

At least 2 YEARS APPLICATION PROGRAMMING experience on mainframe or advanced terminal systems is required. Any practical knowledge of structured programming or database techniques would be advantageous.

Interested?

In addition to the advantageous mortgage rates, benefits include excellent pension scheme, subsidised BUPA membership, season ticket loan, 21 days annual leave, social amenities etc.

For further technical information about these jobs please telephone Rob Farbrother, Deputy Manager of our Systems Dept. on 01-486 5555 Ext. 3393.

For an application form telephone or write to:

Mrs. F. H. Wakefield
Senior Personnel Officer
Abbey National Building Society
27 Baker Street London W1. Tel: 01-486 5544 Ext. 352

ABBEX NATIONAL

GMC COUNTY ENGINEER'S DEPARTMENT

ANALYST/PROGRAMMER — SO 1/2

£8721 / £8627 p.a. (award pending)

The Department operates a PRIME 400 Mini-Computer which provides a terminal service to all groups within it. The person appointed will assist in the development of technical and management information systems. Applicants should preferably possess a degree in a numerical discipline and have at least 3 years Fortran programming experience. Conditions of service include removal, legal etc. expenses up to £750; lodging allowance; 28 days' annual leave + 8 statutory holidays.

Application form, job description and further details available from the County Personnel Officer, County Hall, Piccadilly Gardens, Manchester M60 3HP. Tel: (081) 247-3328/8. Closing date — 8th April.

JOIN THE MICRO COMPUTER REVOLUTION

MICROCOMPUTERS LTD., Friar Road, Hemel Hempstead is a new division of a well-established company. After only one year's trading Microcom has become a leader in the U.K. Micro Computer business and has a turnover of £200k plus. We are growing at a fantastic rate and good people are required to join the current staff of 25 and assist in its continuing expansion.

The main personal qualities for the following appointment is the ability to work under pressure, enthusiasm, with a strong sense of responsibility and initiative. In return career prospects will be linked to growth and you will command an excellent salary. Please seriously consider the following appointment:

ASSISTANT TO DEALER MANAGER

who will select, service, and coordinate the national network of dealers for microcomputers, involving field visits, occasional demonstrations and the identification of business opportunities.

You would be expected to deputise for the Dealer Manager in all the above areas. Experience in the electronics or office machine market or related areas would be a distinct advantage. Age preferably 25-35.

Please telephone for an application form to: Mrs. S. Wharton, Data Systems Ltd., Market Road, Hemel Hempstead, Tel: 0462 85881

Middle East

Systems Programmer

£14,000 Tax Free

Plus company car & free accommodation and more

This position is a permanent staff job with a major distribution company at its M.E. headquarters in Saudi Arabia. The site is on the coast of Jeddah where ample opportunity exists for sailing, swimming and scuba-diving, etc. An active social scene awaits the successful candidate. The machine is an IBM 370/115 DOS/VS running batch systems with on-line processing planned for early 1981 when a 4341 will be delivered. Languages used are PL/I, COBOL and FORTRAN. Systems Programmers must have at least 2 years DOS/VS experience, a good exposure to CICS and preferably, VSAM. Conversion to VSE is planned.

AVIONICS — SCIENTIFIC PROGRAMMERS

SALARIES £6,000-£12,000
LONDON/HOME COUNTIES/SOUTH

We have a large number of openings for people with scientific or avionics expertise. These opportunities are wide and varied and some involve expatriation overseas travel. Candidates should hold a degree in a scientific discipline and have experience in some of the following areas:

SOFTWARE DESIGN * REAL TIME MINI/MICRO SYSTEMS * AVIONICS & DEFENCE SYSTEMS * ASSEMBLY LEVEL LANGUAGES * FLIGHT SIMULATION * MATHEMATICAL MODELLING.

These appointments are placed throughout the above locations and all are with reputable established companies. For further details please contact Mike Howard.

SURREY/SW LONDON SYSTEMS ANALYST

£7,000-£9,000

SENIOR PROGRAMMER

£6,000-£7,500

JUNIOR SYSTEMS PROGRAMMER

£6,000-£7,500

This is without doubt an exceptionally good time to team up with a progressive installation based in NW Surrey. Consider the following:

- * New IBM 4341 4MB due soon
- * New Database and TP projects
- * New word processing system in use
- * Current environment IBM 370/148, DL/1 CICS, PL/1, MK.IV, APL
- * Car/mileage allowance, parking and generous holidays
- * A relaxed and friendly professional atmosphere.

The above reflects the current status of a challenging environment. Full training is provided in order that you may fully exploit the system potential and career prospects.

All candidates should have relevant experience. For further details please contact Eddie Howard.

SENIOR DESIGNERS

LONDON/HOME COUNTIES to £11,000

We are recruiting on behalf of a highly successful software consultancy who are part of a leading American Software Engineering Company.

They are currently in the process of establishing their second UK office to the north of London and consequently have a requirement for professional personnel who are conveniently located to north London or Midlands.

Ideally, candidates will have a science or mathematical degree and experience in one or more of the following:

- * Navigational Aids * Flight Simulation
- * Telemetry * Signal Processing
- * Process Control * A.T.E. Robotics
- * Coice Communication * Operating Systems
- * Compilers * Graphics

This is a unique opportunity to join a young, dynamic organisation where creative effort is highly rewarded and employees are recognised as individuals.

For further details please contact Eddie Howard.

MICHELIN

SWITCH TO MICHELIN SENIOR ANALYST— PROGRAMMER

MANAGEMENT SERVICES DEPT., LONDON, S.W.3

Michelin, the leading British radial tyre manufacturer, wish to recruit a Senior Analyst Programmer to be a project leader, with direct responsibility for the analysis, design and programming of Commercial Computer Systems.

The work involves some liaison with the main-frame installation at our Stoke-on-Trent Manufacturing Headquarters and Commercial offices throughout the U.K.

Good experience of analysis and programming essential. Sound training in programming on manufacturers or equivalent courses is essential, which should have included COBOL.

Age range: ideally over 25 years with a minimum of 5 years' experience on Honeywell/IBM/ICL Computer equipment in an Industrial/Commercial environment.

Michelin offer an individually negotiated salary to attract the calibre of Senior Analyst-Programmer required; five weeks' paid holiday plus statutory holidays; free life assurance and contributory pension scheme.

Above all we offer a career associated with first-class products renowned for their quality, together with effective Personnel Policies.

Please write in confidence giving details of age, work experience, qualifications and current salary to:

up to £10,000
An exciting time to join Sangers

Our record of service goes back 200 years and since our formation we have grown steadily to reach our present position as Britain's leading distributor of products to the pharmaceutical, photographic and grocery trades, retail optical practices and with a growing agency division.

We're now a group with annual sales exceeding £100 million and with the continuing development of our operations and the establishment of new divisions, we're now embarking on an exciting and far-reaching programme of expansion in data processing and are working towards an extensive distributed processing environment.

At present we have an IBM 370/145 but this is being replaced shortly by an IBM 4300 together with IBM Series 1 mini-computers for on-line local control and direct entry of orders from customers' premises. It's a challenging task and to assist us in developing and implementing the complex new systems we now require men and women as:

Senior Systems Analysts/ Project Leaders

To lead project teams and be responsible for implementing systems within a defined area of business. This will involve close liaison with Systems Development management and will carry responsibility for leading a team of Analysts and Programmers. It calls for an essentially hands-on approach together

with a broad knowledge of business systems and practical experience of systems analysis. A knowledge of distributed processing techniques would be an advantage.

Systems Analysts

Appointments are to be made at several levels in project teams working on the installations of systems on both the Series 1 and main-frame computers. Sound systems analysis experience is essential, preferably coupled with a programming background. Alternatively, an experienced programmer looking for an opportunity to move into systems analysis might also be considered.

Our DP Department is pleasantly situated in an attractive area of rural Cambridgeshire yet is within 45 minutes of London by train. Housing is easily obtainable and relatively inexpensive.

We can offer highly competitive salaries and an attractive range of benefits including pension and life assurance schemes, BUPA and assistance with relocation, will be given, where appropriate.

This is an excellent time to join Sangers at a particularly significant stage of our growth and future prospects for career development within the Group are first-class.

Telephone in the first instance with details of experience to Terry Devey Smith, Administrative Services Manager, The Sangers Group Limited, Huntingdon, on 0480 57381.

SANGERS

CLASSIFIED COPY

All classified copy should reach our offices no later than 3.30 p.m. on the Monday preceding Thursday's publication.

If complete artwork is supplied 11 a.m. on a Tuesday, Ring: Rev. Kelly for further details on 01-281 8018.

SENIOR COMPUTER OPERATOR

£6820-£6937

(Comparability Award Pending)

Applications are invited for the above vacancy in the Borough's Computer Section.

Applicants should have several years' operating experience preferably under George 2, and be capable of taking responsibility for the efficient running of the current ICL 1803T system.

The post involves the supervision of four staff on a single shift system.

For further information please ring Tony Williams on 01-388 6656 Ext. 2447.

Application forms are available from the Borough Treasurer, P.O. Box 54, Civic Centre, Silver Street, Enfield EN1 3XF (366-6655 Ext. 2852). Closing date 4th April, 1980. Please quote reference DRA/653.

London Borough of

Enfield

MINI COMPUTER OPERATOR

£3,822-£4,230

DORKING

For the Headquarters of the South Eastern Road Construction Unit. Applicants should be capable of operating a mini-computer in batch mode, and be linked to computer bureaux and to services equipment used in conjunction with mini-computers.

They should have GCE 'O' level mathematics or GCSE or ONC with some computer experience.

The appointment will be temporary for a period of approximately 4 years but there may be an opportunity for extended employment.

Application form: Main County Council (Post Box No. 43), Highway House, 21 Church Road, West Ewell, Epsom, Surrey, Tel: 01-354 1788 Ext 215. Closing date 9 April 1980.

Germany-ICL & DEC

A major force in the systems and software field, this British Software House has considerable interests in the German market. They have several offices established in Germany and are seeking to recruit additional personnel for these offices. The main requirement is for Programmers, Analysts/Programmers and Analysts with experience of ICL System 10, Series 1500, 1900 and 2900 (especially minis) or DEC PDP's. A working knowledge of German would be a considerable advantage, as client liaison will be involved. Mobility is important as

you will be travelling to Clients' offices throughout Germany. These are permanent positions, with excellent career opportunities for those wishing to move to Germany on a long term basis. Relocation assistance will be given, other company benefits considerable.

£12-18K

Sales Engs

Sales Engineers wanted by leading British Instrumentation and Control Company for various regions in England (mainly Midlands and South). The equipment being marketed is for process control applications, chiefly in the paper industry, therefore experience in these areas would be advantageous.

Proj. Leaders

Leading Software House in London Area is seeking Project Leaders for development work on minicomputers. A degree is desirable, plus a background in the areas of financial or automation systems, with experience of handling complete systems, from feasibility studies to implementation.

to £10K

Thames Valley

Business Consultants & Sr. Programmers

Business Consultants: an unusual opportunity for Analysts with 7-10 years experience in the computer industry to move into the Consultancy field, dealing with this Systems Company's Clients in the UK (predominantly the Thames Valley area). Applicants should have a broad computing background with knowledge of two or three machine ranges and similarly wide experience of applications in the commercial field. The prospects for successful applicants are excellent, as they will be able to progress into senior consultancy positions, and there will be opportunities for overseas work in the future.

Senior Programmers: 3-5 years programming experience in at least one commercial language such as BASIC, DIBOL, COBOL or similar on minicomputers — Data General experience currently of particular interest — to work on various projects currently being undertaken by our Clients. This experience should have been gained in the area of on-line applications such as Telesales, Stock Control, Order Processing etc. Project teams are based at the Company's offices in Berkshire. Some client liaison will be involved, therefore good communication skills are required. For those showing the right qualities there is an established career path into Project Leadership and beyond.

Starting salaries to £9K

Financial Systems

Financial Institution (Home Counties) with a wide variety of interests in banking and allied fields requires a Systems Analyst, an Application Programmer and a Systems Programmer for their IBM 370/148 installation (hardware due to be updated in the near future). The Systems Analyst should have 2-3 years commercial experience in the financial area. Applications Programmers should offer 2 or more years PL/1, preferably with some COBOL. For the Systems Programmer, 18 months Assembler is the minimum requirement, further training will be given if necessary. The benefits of working for this Company include a non-contributory pension scheme, mortgage subsidy, free life assurance etc plus relocation assistance where applicable.

to £8K+benefits

Basic +

Programmers with 18 months experience of Basic + on PDP 11's, and a background in commercial applications or production control systems, required by Central London Systems House. The Company is small enough for you to make a significant contribution to their progress, and your efforts will be well rewarded.

c. £7K

Hants

Programmer with a minimum of six months practical PL/1 experience required by Computer Manufacturers in South Hants. Initial responsibilities will chiefly involve programming a new TP based system, after which there will be a variety of interesting opportunities and projects to join.

NEW DEPARTMENT BASED IN CENTRAL LONDON NEW DEVELOPMENTS ON REAL-TIME MINIS

Montague L. Meyer Ltd., Britain's leading timber Group has established a major new computer development for all their operations which include timber importing and distribution, manufacturing in related fields and a network of builders' merchants, timber merchants and home improvement centres.

Based near King's Cross, the new department will implement mini-based business systems throughout the UK and qualified personnel are urgently required for the following:-

SENIOR PROGRAMMERS £7,000 - £8,500

Should have 2-3 years' good experience, some of it preferably with on-line data base or mini systems. Real prospects for those able to accept responsibility.

PROGRAMMERS £5,700 - £7,000

With up to 2 years' solid programming experience - any machine, any language. 1979 graduates will be considered.

We are interested in personnel with the ability to learn fast and produce high quality software in a tight timescale. Specific hardware or software experience not essential.

We offer DEC PDP-11 hardware, many new business applications, full training in software and business systems and for the right people fast promotion within a rapidly growing department.

* Season Ticket Loan Scheme * Discount on Company Products * 4 weeks' holiday * Contributory Pension Scheme * Free Life Assurance

TEAM LEADERS £8,000 - £9,000

Preferably with experience of leading a small team of programmers. Knowledge of DSM-11 or MUMPS would be a distinct advantage.

TECHNICAL SUPPORT £7,500 - £9,000

Must have an interest in all aspects of supporting a multi-site on-line operation - from systems software through hardware to user training.

Telephone David Hall on 01-278 2366 for more information

Or write to Computer Department, Montague L. Meyer Ltd., Mercantile House, All Saints Street, London N1 9RW

GRAPHICS

Senior Product Sales Executive - Basic Salary up to £13,500

Exceptional Guarantee + Car + BUPA + Relocation

Our Client is a UK subsidiary of the world's leading manufacturer of advanced computer graphics systems. The product is already selling in the United States and has been well received in the UK.

At superb offices in Berkshire full demonstration and support facilities will be available to the fortunate applicant, who will be able to use his/her skills of marketing and sales to pioneer this impressive and demonstrable system.

Having regular contact with the United States, you will be dynamically contributing towards the total marketing effort within the United Kingdom. The company is committed to the success of this outstanding product and envisage taking on further Sales Executives in 1981, who will report to you.

Essentially, you should have CAD/CAM experience, either in a sales or a user role. As full sales and product training will be given, don't be put off if you are not in direct sales, as long as you feel you have a strong sales personality.

If you know about interactive graphics systems, you will know it is THE growth area within the industry. What's more, when you see this particular system, you will recognise how advanced it is and most certainly want to market it.

Their total commitment is reflected in their enthusiasm, dedication and belief that their IGS product is the best in the world. To substantiate this, they have formulated an outstanding earnings package, which indicates the importance of the position.

If you want to use your pioneering spirit, but want the security of a large and profitable company with a stunning product, in the first instance, to arrange an interview, contact:

SIMON LEVER
ON 021-236 3781 (24-hour answering service)

ADVANCED NETWORKING

SWURCC needs 3 Systems Programmers to join a team developing one of Europe's most advanced computer networks. These posts combine a unique opportunity to acquire extensive expertise in modern networking, using ICL 2900, Honeywell Multics, OEC VAX, or GEC 4000 hardware, with the opportunity to live in the peaceful countryside around Bath and Bristol.

Ideally applicants will have networking or operating systems experience, but recent graduates lacking this experience are encouraged to apply.

Salaries will be on the scales £5052-£8769 or £8083-£10484 (both under review). The posts are for 3 years' initially.

For a detailed description of the posts, and of SWURCC, contact the Personnel Officer, University of Bath, BATH BA2 7AY (0225 61244, extension 700), quoting reference B0/3R. Closing date April 9th.

PLANNERS

Projects and Programmes

We need a person with initiative and enthusiasm to join the staff of a small, friendly section based in modern offices near central Wembley (Mortlsdale, 11 mins.) to help in planning and monitoring the efficient use of resources - time, people, money, land - on the Council's Capital Programmes.

Candidates should be experienced in one of the following: network analysis, corporate planning or project co-ordination, resource scheduling and cost control.

Salary £6,111 to £8,480 per annum inclusive

You also must be capable of relating effectively to management and professional staff.

For further details phone Keith Whitham on 01-903 1400 ext. 416.

Generous relocation expenses and flexible working hours available.

Application forms from the Administration Manager, Room 708, Brent House, High Road, Wembley, Middlesex, returnable 4th April 1980.

Telephone 01-903 0371 (24 hours Answering Service).

Reference number 07/296/J0 must be quoted.

SOUTH AFRICA

Systems Analysts and Business Analysts Up to £13,000 package

Liberty Life Association is South Africa's largest publicly owned and fastest growing life assurance and investment group (assets in excess of £500 million, a 30 fold increase since 1970). It has strong international associations in particular with the Guardian Royal Exchange Assurance in the U.K. Our rapid expansion means that we have opportunities for you to join us and work together to achieve our ambitious plans. Among the many large systems we are building are a sophisticated on-line real-time new business administration system and a branch sales support system allowing policy quotations to be given by salesman in the client's office or house using a telephone coupling link, the Silent 7002. Based in Johannesburg we currently run two IBM 370/158s with a select systems development staff of less than forty people working closely with top management. We are converting to MVS and will be installing the well-known Adabas Database System.

SENIOR SYSTEMS ANALYSTS

You will have potential to move into management. You would lead the technological side of a project with up to six people reporting to you. You should have a good business background and it would be an advantage if you have had life assurance experience and a business degree.

BUSINESS ANALYSTS

Your life assurance experience will be utilised to the greatest advantage. Your strong business understanding and innovative ability will blend well with the technological strength of your colleagues. A business degree would be an important plus. You should have installed or worked on a data processing based system but not necessarily on the DP aspects.

WE OFFER YOU

- * A four-year contract (or permanent position).
- * Paid air fares to South Africa.
- * Relocation and resettlement allowances.
- * Paid hotel accommodation for one month on arrival.
- * Our package includes a bonus, medical aid, life insurance, and, for the right people, participation in our senior staff stock option scheme.
- * Attractive termination benefits.

We will be in London for final interviews between 14 and 18 April. We have asked Ched Stolper of Prescott Computers to interview you. Please telephone him at: (01) 434 2698/9 or, if you prefer, write to him at: 43 Conduit Street, London, W.1.

(219)

Cambridge City Council SYSTEMS ANALYST (Re-Advertisement) (Salary up to £6,090, with Comparability Award pending)

An additional Systems Analyst is required to join a small team within the City Treasurer's Department. The Council operate an ICL 2904 with EDS 80s and two 7602s serving enquiries and ICL's new Counter Terminal System.

The main development in the next two years will be a Management Information System running under Osebesse Management Software. Further information is obtainable from the Computer Manager, D. Smith, (0223-35977 Ext. 294). Relocation and assistance with housing accommodation are allowed in approved cases. Other benefits include flexitime and staff restaurant. Applications giving full details of experience and qualifications and naming two referees must reach the undersigned by Monday 31st March 1980. Previous applicants need not re-apply. City Treasurer, Guildhall, Cambridge CB2 3QJ.

PROJECT LEADER to £10k. BERKSHIRE

This vacancy offers an unrivalled opportunity to get in at the start of a prestigious and major development project whose success is critical enough to effect the future performance and profitability of our client's operation.

Apart from the essential personal characteristics normally associated with a position of this type, the candidate should possess:

- A sound track record implementing commercial applications to budget — knowledge of distribution systems would be especially relevant.
- Project Leadership skills.
- The confidence and ability to sell his ideas to users and see them through to fruition.
- Ideally a background that has included exposure to IBM OS.

The likelihood is that you are currently an analyst or senior analyst, although consideration will be given to a senior programmer wishing to accelerate his career into systems who has seen at least one major system through from start to finish. The installation is located close to the M4 in Berkshire but within reach of parts of Middlesex, Surrey and Buckinghamshire. To those not resident in those areas relocation would be paid.

For more information about this job contact JACK COLLINGS during office hours (9-5) on 0273 833848 or at home any evening on 0273 400880. Interviews can always be arranged locally or in London.

(21)

MYRIAD MANAGER OF ADVANCED DEVELOPMENT DATA COMMUNICATIONS

BERKSHIRE

To start c. £10,750

With the increasing emphasis being placed upon distributed processing and remote computing, data communications is now one of the most critical areas of the computer industry. The person appointed will therefore need to be able to offer significant expertise in either DIGITAL NETWORKING or MAINFRAME COMMUNICATIONS. Additionally a proven background in MICRO-PROCESSOR TECHNOLOGY will be essential since micros will continue to play an ever increasing role in new transmission systems.

The successful candidate will need to be aware of general developments at the forefront of component and systems technology. He/she will therefore attend conferences and exhibitions on the company's behalf and is likely to pay occasional visits to the U.S. in order to keep up to date with progress there.

This position is an ideal opportunity for a skilled technician to accept the challenge of managing a team dedicated to the investigation and evaluation of new and sophisticated technologies.

As a member of Britain's fastest growing electronics group the company is already marketing a highly respected and very successful range of products throughout the U.K., Europe and the Middle East. In order to continue to enhance its market-share the company is continually seeking to extend its technological lead and the Advanced Development group plays a major role in this respect.

This is a senior position within the company which carries a high commencing salary. Additionally free BUPA cover, an excellent pension scheme with free life assurance, five weeks' annual leave and comprehensive relocation expenses where applicable ensure an attractive remuneration package. REF: SW1/2003/CW

SYSTEMS ANALYSTS

YOUR NEXT CAREER MOVE

NEAR WINDSOR

£7,000-£9,000

We have been retained to recruit a Systems Analyst who is seeking a career move to a senior role, for our Clients, a major British Engineering Group of Companies, presently developing integrated systems to support their business activities during the 1980s. An IBM 370/158 running under MVS together with mini-computers in a distributed processing network are already installed as the hardware base for the new applications.

The person appointed will assume overall responsibility for the business analysis and system design of new Sales Order Processing and Inventory Control systems which will make extensive use of IMS Database and Real-time techniques. Responsible for the definition, with Users, of system requirements and for the co-ordination of the system design, the person appointed will be able to demonstrate a sound business analysis background and strong personal communications skills. Knowledge of real-time applications is essential.

An excellent starting salary will be negotiated. Benefits include five weeks' holiday, free BUPA, flexible working hours and a Sports and Social Club.

This appointment represents an outstanding opportunity to develop your career in a highly professional organisation.

For a confidential discussion on this appointment, telephone Myriad Appointments now.

Network Planning Analyst

The Ferranti Weapons Equipment Department at Moston is engaged in development programmes and production operations for a wide range of defence projects. The planning and control of these complex projects—from initial design right through to large scale production—is the responsibility of a multi-disciplinary team using computer techniques.

Liaising with trials, design and manufacturing engineers, the Network Planning Analyst will be engaged in preparing and modifying networks together with the compilation and use of computer data to regularly update cycles, etc.

Applicants, male or female, should have experience in P.E.R.T. and C.P.A. techniques coupled preferably with knowledge of ICL 1900 Series PERT package. Candidates with production control and scheduling experience may also find this position attractive and there would be full technique training given in these circumstances.

Salary and conditions of service are competitive and there are good career development prospects with this progressive advanced technology company.

Please write or telephone: W. Muff, Personnel Officer, Ferranti Instrumentation Limited, Moston, Manchester M10 0BE. Tel: 061 881 2071.

UNIVERSITY OF NEWCASTLE UPON TYNE MICROELECTRONICS APPLICATIONS RESEARCH INSTITUTE SENIOR RESEARCH ASSOCIATE

The University, in collaboration with Newcastle upon Tyne Polytechnic and Computer Analysis & Programmers Limited, has set up a major new Institute to undertake applied research and development projects for industrial and government clients relating to advanced applications of programmable microelectronics. Applications are invited for a Senior Research Associateship sponsored by the Science Research Council. Candidates should have a Ph.D. or equivalent research experience in the hardware and/or software aspects of modern digital system design, and a keen interest in developing new applications of programmable microelectronics. The work will involve interactions with relevant research activities throughout the University and with industry, with the aim of identifying promising work applications and investigating their feasibility.

The appointment will be for three years commencing 1st May 1980, or such later date as may be arranged, with a salary in the range £15,000-£20,000 per annum, according to age, qualifications and experience. Membership of the appropriate University superannuation scheme will be secured.

Applicants should send a detailed curriculum vitae, and three references, to: Dr. J. Randall, Computing Laboratory, The University, Newcastle upon Tyne, NE1 7RL, from whom further details can be obtained. The closing date for receipt of applications is 11th April 1980. Please quote reference CN.

UNIVERSITY OF YORK Department of Computer Science

COMPUTER SOFTWARE TECHNICIAN

Applications are invited for the above post from applicants with some experience of computer programming and an appropriate qualification. The post will involve assisting staff and students in teaching and research activities and includes programming and writing documentation for POP-11, DEC system-10 and micro-computer systems. Salary on Grade 3, from 1st April, 1980. £3,584-£4,082.

Applications in writing, giving the names and addresses of two referees, should be sent to the Deputy Bursar, University of York, Heslington, York YO1 5DD by Friday, 28th March, 1980.

ANALYST/ PROGRAMMER

c. £8,800 per annum

We are a well-known firm of transportation planning consultants and we have a challenging opportunity for an analyst/programmer to develop and support our computer systems. Applicants should be graduates with significant FORTRAN experience and preference will be given to those with scientific or mathematical programming ability. The duties include working directly with other professional staff in developing complex scientific suites for main frame and mini computer hardware.

The base of work will be in our London office but the successful applicant will advise and assist work in our other U.K. offices and there may be opportunities for short periods of work abroad.

The position is permanent and pensionable and there are considerable opportunities for advancement. Written applications, giving personal and career details to:

Jamieson Mackay and Partners
3 Mandeville Place
London W1M 6LB

(26)

LONDON BOROUGH OF MERTON MERTON TECHNICAL COLLEGE

LECTURER GRADE II IN COMPUTING

to teach business applications of computers and other data processing equipment on mainly BSC and Accounting Courses, in the Department of Business Studies and Management.

Applicants should be graduates or possess equivalent qualifications. Preference will be given to candidates with recent practical experience in the business or commercial data-processing field. An ability to teach elementary Book-keeping/Accounts would be an advantage.

Salary: Burnham Scale, Lecturer Grade II: £6400-£7655 p.a. plus £200 p.a. London Allowance.

Application form and further particulars are available from the Chief Administrative Officer, Merton Technical College, Morden Park, London Road, Morden, Surrey, to whom applications should be returned within two weeks.

Acting Director, Education

Heavy weight, Middle weight and Junior Systems Analysts and Programmers

For our European Systems Development Team

The computer industry is growing and one of the fastest rising names within it is Digital. We're increasing our market share in most aspects of computing and in several areas we are world leaders.

The Company's tremendous growth has created the need for three more professionals to join our European Information Services (EIS) function.

Digital's EIS group, based at our UK headquarters in Reading, Berks, provides information systems and services for our European organisation. It is a vital function with a direct influence on our efficiency and profitability.

We are looking for:

Senior Systems Analyst

—someone with 5 years practical systems analysis experience with the proven ability to interface with user management at all levels.

Programmer/Analyst

—someone with at least 3 years experience as a programmer/analyst including some project management and successful computer systems design.

Programmer

—a young ambitious professional with at least 1 year's programming experience. We consider experience of working with minicomputers in a commercial environment an important factor.

Despite the varying levels of experience, this will be a high-level team. We are therefore looking for graduates (or equivalent) who have a good knowledge of computer software capabilities. This must be supported by knowledge of one of: Accounting,

Engineering, Business Administration, Production Control, Manufacturing or Marketing.

You will use the latest and most sophisticated equipment in the Digital range. As a member of this fast-growing group you will be able to make a positive contribution to our success. Promotion prospects are exceptionally good for those with ability.

Naturally, we offer highly attractive salaries and comprehensive benefits. If you'd like to make your mark in a development team with opportunities to travel within Europe, telephone or write to: Quoting Ref. 730: Jan Becker, Digital Equipment Company Ltd., 2 Cheapside, Reading, Berks.
Tel: Reading (0734) 583555.

Systems Analyst

R18,000 plus generous fringe benefits
S.W. Africa-Namibia

Rössing Uranium Limited, a member of the RTZ Group, has a vacancy for a Systems Analyst to join their progressive Data Processing Unit in Swakopmund, S.W. Africa-Namibia. Applicants should have at least four years' experience and a proven record of implementing high standard systems on schedule.

The successful applicant will have the opportunity of working with a wide range of interesting on-line and batch systems in a stimulating environment using twin ICL machines with MINIMAC and TPS. IDEMS is planned during the course of this year.

In addition to an excellent starting salary the company also offers housing at a nominal rental, subsidised water and electricity, annual holiday bonus, generous leave and excellent pension and medical schemes. A married man with two children will pay approx. R3,300 income tax on above mentioned salary in S.W. Africa-Namibia. Swakopmund is an attractive seaside resort with a mild and pleasant climate and good educational, medical, social and sports facilities. The appointment is permanent and not on a contract or expatriate basis.

(182)

Rössing Uranium

A member of the RTZ Group

UNIVERSITY OF ABERDEEN COMPUTING CENTRE

The University Computer Service is based on a Honeywell 66/80 Dual-Processor mainframe housed in the Computer Operations Centre at West Seaton. The system provides for a mixed batch and timesharing workload, and currently supports over 150 remote terminals, as well as providing the major source of computing power to a regional network serving four other Scottish Universities. Applications are invited for the following posts:

SHIFT LEADER

Applicants should have at least four years' operating experience on a large mainframe supporting a terminal network, including preferably at least one year's experience as a Senior Operator. Salary on scale: £4188 to £5154 per annum, with appropriate placing.

SENIOR OPERATOR

Applicants should have at least three years' experience, preferably on a large mainframe supporting a terminal network. Salary on scale: £3387 to £4152 per annum with appropriate placing. Both appointments will involve compulsory shift working, in respect of which a supplement of up to 20% of salary is payable.

Application forms are obtainable from the Secretary, University Office, Regent Walk, Aberdeen AB9 1FX to whom they should be returned by 3 April, 1980.

COLE

A BETTER LINE OF COMMUNICATION

Due to a period of sustained growth and the introduction of new generations of data communications equipment from our principals including CODEX Intelligent Network Processors, Micro-Systems, Front End Processors, opportunities are now arising at our Croydon and Manchester Offices.

SYSTEMS ENGINEERING

Ref: 1180

SYSTEMS PROGRAMMER

To £10,000 plus car

Ideally the successful applicant will have had five years' previous experience in systems programming and, preferably, the experience of I.B.M. Mainframes, Batch and Interactive Communications and Interfacing Plug Compatible Manufactured Products with I.B.M. equipment.

Responsibilities will include:

Definition of Customer requirements, preparation of proposals, System Generation, Installation and Debugging, Customer Software Support and Operator Training.

Ref: 1280

SOFTWARE APPLICATIONS ENGINEERS

To £9,800 plus car

The preferable requirements for this position are an education to degree or similar high standard together with five years' previous experience in programming and also experience in a sales environment. An essential qualification would be Cobol experience.

Responsibilities will include:

System definitions, formulation of proposals, liaison with Customer programmers, special applications, definition and supervision and Field Service liaison.

Ref: 1380

APPLICATIONS ENGINEERS

To £9,000 plus car

This post preferably requires a person with experience of large Data Communication Networks, defining systems both as user and in a sales environment, large proposal preparation and presentation to customers.

Responsibilities will include:

System definitions, formulation of proposals, sales training, customer presentations and large system checkouts.

SALESPERSONS

Ref: 1580

MICROSYSTEMS SALESPERSONS

To £6,800 plus commission and car

Preferably required with experience of selling intelligent terminals. If applicants without selling experience have programming training, systems analysis background and knowledge of protocols, the Company is prepared to offer sales training.

Ref: 1880

SALES ENGINEERS SPECIAL PROJECTS

To £6,200 plus commission and car

Sales Engineers are required to promote the sales of a range of products which have a specialised application within the data communication industry, for example, Technical Control, Data Monitoring and Testing etc. These products are marketed by our entire sales team but additional selling effort is required by sales Engineers who have sole responsibility for ensuring these products reach maximum sales potential.

Ref: 1780

TRAINEE SALES ENGINEERS

The Company would be interested to hear from Graduates and Engineers who have had experience in the Data Communication and Computer Peripheral Industry and would be interested in establishing a career in selling data communication equipment.

BENEFITS

Free Life Assurance and Income Continuance Plan, non-contributory pension scheme, free B.U.P.A. membership, four weeks' holiday, some assistance can be given with re-location expenses.

A REAL OPPORTUNITY FOR LOGIC DESIGN ENGINEERS

MESSAGE SWITCHING CITY BASED

This company is an independent part of one of the world's leading communications groups. A new development group has recently been formed to develop a comprehensive message-switching system offering a total solution — Hardware, Software and support — to communications problems. The system is based on the T.I. 990/10.

SENIOR DEVELOPMENT ENGINEER

TO £9,250

To work on the design of interfaces and controllers for use with mini and micro computer based systems. The applicants for this post should be graduate engineers with several years' experience of TTL logic design and familiarity with some of the following:

- ★ DATACOMMUNICATIONS
- ★ ASSEMBLY LEVEL PROGRAMMING
- ★ MICROPROCESSORS

This position will interact someone with the ability to work with minimum supervision.

DEVELOPMENT ENGINEER

TO £7,250

The development engineer will be qualified to a minimum H.N.C. level with sound experience in logic design and transistor circuit design. A knowledge of Line Conditioning on Telar or Telegraph networks would be useful.

Both of these positions will be directly responsible to the Hardware Development Manager, and will require self-motivation, creative ability and a high degree of technical competence. Career prospects will be attractive to those prepared to identify with the company's development objectives.

JBA

Micro — Software Sales

London Based Earnings c. £18,000 + (+ CAR etc.)

Our client is beginning to acquire an outstanding reputation throughout the commercial d.p. world for the innovativeness and flair of its software products. Their aim has been to make the micro easy and flexible to use in an interactive commercial environment — and there is no doubt that they have succeeded. Opportunities exist in the company's Sales and Marketing team for professional, successful sales personnel who can sell worldwide. At present, the vast majority of their sales are made to the USA and Europe and the directors wish to see this trend continue — experience of working in non-UK markets is therefore particularly welcome.

Contact: Andy Wright

Data Communications Systems

London £8,500 to £11,000

Our client has requirements in two specific areas for Communications Consultants at various levels.

First — the company's activities in developments towards the Electronic Office require expertise gained in message switching, packet switching or word processor systems.

Second — pure Communications experience is required, which will include extensive knowledge of P.O. DATEL services, P.O. procedures and practices, switching systems and data transmission facilities.

If you can contribute in either of these two areas, and would like the opportunity to join one of the most highly respected systems houses in the U.K., phone today.

Contact: Margaret Stevens

Software Programmers

Berkshire £8,000 — £11,000

A real chance to join a small dedicated group of mini-computer software development technicians in a computer manufacturing company. The team are involved in the design of data management software, compilers, and related packages, for an increasing range of business orientated machines that are recognised as being among the leading products in this sector of the market. Applicants must have at least four years experience of similar work using advanced techniques. A degree or post-graduate work on system software or compiler architecture would be an advantage.

The company offers an attractive employment package, pleasant working environment and the opportunity to assume responsibility for projects within the group concept.

Contact: Mike Creamer

Systems Consultant

Thames Valley up to £9,000

A new micro-systems house wishes to employ a Senior Systems Consultant to undertake the initial investigation/feasibility studies for prospective micro users. Candidates must have five years of sound commercial experience particularly in accounting and financial applications. An opportunity to be in on the ground floor and help develop the company.

Contact: Jim Baker

Production Control Systems

Rugby c. £7,500

A medium sized engineering company is seeking a SENIOR SYSTEMS ANALYST to work on the development and implementation of production control systems within their UK Group.

Applicants should have a minimum of 3 years commercial analysis and design experience with a bias towards production or manufacturing systems. Experience of an IBM 370 environment would be an advantage.

Excellent opportunities in a new installation.

Contact: Bev Stevens

INSURANCE COMPANY

Systems Analysts

South of England

Salaries up to £7,100 + mortgage subsidy + non-contributory pension + free permanent health scheme + low interest loans + subsidised canteen and sports/social club + all relocation expenses + other benefits.

A very attractive prospect for career-minded Analysts, keen to progress in a growth-orientated modern company putting in database and TP systems, promising exciting design and development work well into the 1980's.

We are keen to hear from Analysts who have a sound business background, a good knowledge of COBOL and experience of system design over two to three years, ideally in an accounting, financial or banking environment.

Contact: Mike Creamer

COBOL Programmers

Andover, Hants. up to £6,700 (review pending)

PLUS: Mortgage subsidy, non-contributory pension, free permanent health insurance, low interest loans, free banking, discount on insurance services, subsidised sports and social club, subsidised canteen, etc.

PLUS: Generous relocation and settling-in allowances. We are looking for 18 months to 2 years concentrated programming experience, gained in a real-time, database environment. In COBOL. Personality and attitude to work are important. Burroughs and/or DMS knowledge very attractive.

SPECIAL SYSTEMS MANAGER c£12K

This is a key position reporting to the European Director of Post Sales Support Services. Responsibilities include the management of a team of HARDWARE and SOFTWARE personnel involved in the design and implementation of special systems.

In addition to project management, this role entails close liaison with the Marketing Division, Systems Houses and customers, to ensure implementation within agreed time frames.

Ideally, the applicant will be experienced in both HARDWARE and SOFTWARE and will have sound business acumen, well able to appreciate costing and financial controls.

Experience of Real-Time/Communication systems would be an advantage.

SPECIAL SYSTEMS ANALYSTS c£9K

These posts involve the design and implementation of non-standard software products and modifications/extensions to existing products. Special Systems Analysts will work in a dynamic environment, and be responsive to new requirements, well able to project a professional image to customers.

Ideally, applicants will have experience in either real-time operating systems, communications software, or mainframe frontending/emulation.

There may be opportunities for travel within Europe.

John is into

EDP STAFF FOR EUROPE

We are a multi-national company who manufacture and sell health care products throughout the world. We have subsidiaries in all major European countries and we are looking for a number of development personnel to expand our decentralised European MIS/EDP departments.

GRENOBLE (France) — Procedures and Training Manager up to £14,000

The European Headquarters of the Company situated on the edge of the French Alps is looking for an experienced EDP professional to be responsible for the technical and functional auditing of the subsidiary EDP functions and to co-ordinate EDP training throughout the European Division. Applicants must have at least 8 years' MIS/EDP experience including programming analysis and organisation. Knowledge of at least one other European language (preferably French) would be appreciated.

GRENOBLE (France) — Analyst-Programmer c. £7,000

The European Headquarters of the Company is also looking for an Analyst-Programmer to be responsible for the development of diverse projects concerning the processing of data from all subsidiaries. We are looking for people with 2-3 years' experience on IBM S32/S34 equipment and who have a thorough knowledge of COBOL and RPG. Although not essential to the function a knowledge of written and spoken French would obviously help the applicant to settle into his/her new situation.

DUBLIN (Ireland) — Systems Analyst

The Irish subsidiary is the largest manufacturing location for the company within Europe, consisting of two factories in the Dublin area. We are looking for someone to design and develop manufacturing systems for an IBM 4300 series computer. The applicants should have 3 to 5 years' experience in a manufacturing environment preferably working with IBM equipment. Knowledge of COBOL is essential and experience of TOTAL would be a significant advantage.

Initial interviews will be held in London, applicants should write enclosing their C.V. to:

DIRECTOR OF HUMAN RESOURCES, C/O BECTON DICKINSON, B.P. 798, 38035 GRENOBLE CEDEX, France

MADRID (Spain) — Analyst-Programmer c. £8,000

To develop commercial and production systems on IBM S34 and to assist the MIS/EDP supervisor in all his functions. The Spanish subsidiary was created in early 1979 and important growth is foreseen. We are looking for an Analyst-Programmer with 2-3 years' experience on relevant equipment and who has thorough knowledge of RPGII and COBOL. In view of the location and the functions to be assumed the applicant should be fluent in Spanish or capable of becoming fluent within a short period.

WEMBLEY (England) — Analyst-Programmer circa £6,000

Working for the UK Subsidiary his/her initial task will be to participate in the joint European development of an interactive order/invoicing and stock control system to be run on IBM S34. Applicants should have 2-3 years' programming experience with at least 1 year as an analyst-programmer working on IBM 32/34. Knowledge of COBOL and RPG is essential.

HEIDELBERG (Germany) — Analyst-Programmer £11,000

Working for the German subsidiary which covers both Germany and Switzerland his/her initial task will be to participate in the joint European development of an interactive order/invoicing and stock control system to be run on IBM S34. Applicants should have 2-3 years' programming experience with at least 1 year as an analyst-programmer working on IBM 32/34. Knowledge of COBOL and RPG is essential. Good knowledge of German is required.

MANAGEMENT & EXECUTIVE SELECTION

SECURITY MONEY CAREER

Expansion into the Eighties with a new range of microprocessor based financial systems has created marvellous opportunities for either experienced sales people or those wishing to enter the sales field, to join the Financial Systems Sales Division of our client, a major conglomerate, based North of London.

To be a successful candidate you should possess both the drive and acumen to negotiate to Senior Director level, as our clients customers are the major names in the financial sector and as such demand the best.

In return you will receive a good earnings package (negotiable on experience) + a company car. Promotional prospects for the right candidate are excellent.

For an immediate interview contact Tony McGrath, on 01-637 9611

COMPUTER OPERATOR

Up to £4,000
Plus 25% shift premium
Medway, Kent.

The Person
Should have 1 year to 18 months IBM operating experience under OS (preferably OS VS1). They should be aged 18-23 with a good standard of written and spoken English and have minimum 'O' level or Grade 1 CSE in English and Maths. 'A' level Sciences would be advantageous.

The Environment
Lloyds is the major international insurance market with a dynamic D.P. centre. We run an IBM system 3031 and an IBM 148 operating DOS and OS under VM370 and in addition 2 DEC PDP 11/70's.

Conditions
We operate a 12 hour shift system and in addition we offer annual 4% bonus, 9p lunches, non-contributory pension, 4 weeks holiday and much more.

For further information
Please telephone Bill Forder, Operations Manager on Medway 407333 ext. 3520, or write to Reg Hannam, Corporation of Lloyd's, Gun Wharf, Dock Road, Chatham ME4 4TU for an application form.

LLOYD'S OF LONDON

Express Dairy Foods is one of Europe's largest dairy companies and the producer of Skil Yogurt, hard cheese and many other dairy products.

Applications are invited from suitably qualified candidates for the following posts in the Management Services Department, based at South Ruislip, where they will be involved in major projects covering:

- the installation of a large mainframe sales accounting system.
- over 35 data general Nova mini computers are being installed into depots, factories, tele sales and various user departments throughout the company.
- Micro computers are being designed and installed for factory processors and commercial applications.

The following applicants will be involved in all three of these major applications as well as traditional O and M type activities.

Project Manager - Operations (£9,500 + car)

We are looking for someone with management and computing experience who is capable of taking responsibility, solving problems and leading a team of skilled professionals. You should have about 7 years experience in the computer operations environment including computer communications. To be a competent programmer and have a knowledge of Business Basic is also essential.

Why this in-depth experience? Because you will be responsible for the implementation of the hardware, the day-to-day support of our mini in the field, the development of new systems and be in control of your own team of programmers.

Project Manager - Systems (£8,500 + car allowance)

A relevant degree or HND plus at least 3 years' programming and analysis experience on mainframe and mini computer and ability to communicate with non-computer personnel is required. You will be responsible for working with factory management to specify projects and to work with software houses on their programs. It will be your responsibility to ensure that projects proceed to plan and on time.

Management Services Officer (£7,000 + car allowance)

You'll need similar qualifications and at least 2 years' experience to those mentioned above and you'll be part of a team dealing with major projects, specifying program formats, systems testing and implementation. You'll need to be capable of taking full responsibility and to work with minimum supervision.

All positions are open to men or women and would suit capable people who can handle responsibility, solve problems and want to develop their skills on systems and computers. The working conditions are excellent and, because the projects are basically network development, there are no long hours. Applicants are expected to visit sites around the country. Apart from the salaries quoted there are good rates for overtime and excellent future prospects.

Please write enclosing a full C.V. to: Peter Slinn, Personnel Administrator, Express Dairy Foods, Block 97, Victoria Road, South Ruislip, Middx. HA4 0HE. Tel. 01-849 2344.

Do you take training seriously?
Our client does.....

- ☆ As the major force in mini-computer based word processing in the U.K. today, they have established an initial training structure, covering product knowledge and sales training, and are committed to still further expansion.
- ☆ Vital to this expansion is a person to undertake the formalisation of customer support training. This will involve direct liaison with the Regional Support Supervisors to create and implement a wide variety of in-house courses for both our clients, staff, and their customers.
- ☆ Experience in training sales support specialists and customer staff in a capital equipment environment is essential (if it's in word processing so much the better).
- ☆ Remuneration will be a basic salary of £7K + car + bonus, 4 weeks holiday, BUPA Life Assurance, etc.
- ☆ Enthusiasm and professionalism are key words within this company, if you have something positive to offer contact Tony McGrath

Suite 201/6 Albany House 324 Regent Street London W1R 5AA Tel 01-637 9611

MANAGEMENT & EXECUTIVE SELECTION

S. Germany £22-25,000 p.a.

CICS Systems Programmer

Senior Systems Programmer to take responsibility for all aspects of CICS tuning, support and future planning. The installation is in the centre of an attractive city, and runs 2 CPUs under DOS/VS and DMS/VS. Applicants should have a thorough knowledge of CICS/VS, and some DL/I and VM experience would be helpful. Although one of your colleagues is English, you will be expected to achieve reasonable fluency in German after 3-4 months.

MVS, JES2, TSO Support

Senior Systems Programmer to work in an extremely pleasant installation as part of a small English-speaking systems support team. Responsibilities will cover all aspects of support for MVS, TSO/TCAM and the network of local and remote terminals. Ideally, applicants should already possess some MVS experience, but with good TSO knowledge a sound VS1 or SVS background will suffice.

IMS Specialist

IMS Specialist to review and report on a medium-sized company's current IMS usage (transaction rates, DB structure, etc.). The successful applicant will probably have a Systems Programming background, with good knowledge of IMS and IMS utilities. No knowledge of German is required for this position.

PL/1, CICS Design/Programming

Senior Programmer with good knowledge of PL/1 and CICS/VS to assist this DOS/VS installation with the technical design, development and implementation of their first CICS system. Test CICS will be up by May, and the first phase of on-line Production Control is due to go live in September. The successful applicant will be expected to contribute to setting up CICS development standards, and will need to achieve reasonable fluency in German after 1-2 months.

Each of these assignments is on a renewable contract basis with CDS AG in Switzerland.

For further details, please telephone or write to Brian Bidston at our UK offices, or call during evenings/weekends on 03444 6386.

CDS The European 370 Specialists

87-73 Park Street, Camberley, Surrey GU15 3PE. Tel. 0278 25846. Telex 868082.

DATA PROCESSING MANAGER

SOUTH COAST

Circa
SALARY £11,500

We require a Data Processing Manager to take responsibility for the maintenance and further development of a well-established system at present based on an IBM 370/148. On-line enquiry and data entry facilities have been in operation for a number of years, and the first stage of a major branch terminal network using IBM 3600 equipment will be implemented in June of this year.

Applicants should be over 30 years of age and should have a proven D.P. management record and a sound technical background including experience of on-line systems.

The location is our modern Administrative Centre in Worthing, West Sussex, which offers excellent working conditions and amenities, including swimming, squash and tennis.

A competitive salary and benefits package is offered, including preferential mortgage terms.

Please send personnel and career details, in confidence, to:

N. MacMahon
Assistant General Manager (Admin.)

Public Services Commission

Data Processing Professionals

Applications are invited from suitably qualified candidates for the following positions with the National Computer Centre, Bureau of Statistics and various other Government Departments.

Assistant Managers Level 21

Candidates will be graduates with a minimum of 11 years DP systems experience, at least 5 years of which should have been in consultancy and/or project management. Familiarity with modern data processing managerial techniques and principles is essential.

Project Leaders Level 19

Candidates will have a minimum of 6 years systems and programming experience including some time as a team leader. Applicants must be able to demonstrate that they have successfully managed either part of a large project or a complete small project.

Senior Systems Analysts Level 19

Candidates must have a minimum of 8 years experience in computer systems work, of which at least 2 years should have been in programming. Some experience in consulting and advising high level management is also essential.

Chief Technical Officer Level 19

Candidates must have at least 6 years experience covering both commercial and scientific programming. Detailed knowledge of ICL software, utilities and hardware is also essential, with particular emphasis on GEORGE 2 + operating system and 1903 hardware.

Systems Analysts Level 17

Candidates who will be user-orientated must have a minimum of 5 years experience in computer systems work, at least 2 years of which should have been in programming. At least 3 years experience in one or more of the following is also essential: commercial systems design; design of statistical, scientific or other governmental data processing systems; project leadership; training; consultancy.

Senior Programmers Level 15

Candidates must have at least 4 years programming experience using COBOL and a low level language (ASSEMBLER). A knowledge of ICL hardware and software, GEORGE 2 + and other systems would be an advantage as would experience of 2950 hardware and software and the development of on-line systems.

Rewards

Payable in Kina. The pound equivalent figures will fluctuate due to movement in exchange rates. The exchange rate at 6th March 1980 was K1.58 to £1 Sterling.

Level	Salary
21	K18,510
19	K16,510
17	K14,660
15	K13,435
12	K11,880

Plus

- * 3 year contract (renewable in most cases).
- * Gratuity of 24% per annum of annual salary. Gratuity is taxed at a flat rate of 2%.
- * Virtually free married or single accommodation.
- * Air fares to and from PNG at commencement and expiry of contract.
- * 6 weeks annual leave with return fares to U.K. during 2nd year of contract (including accompanying dependents).
- * Free Primary Schooling, Free Secondary Schooling.
- * Generous education subsidies (fees and fares for dependent children attending school overseas).

Please write or telephone, quoting reference V/S/PSC-NCC/11 and position(s) interested in for application forms (to be completed in duplicate) and further details to:

The Recruitment Attaché, The Papua New Guinea High Commission, 14 Waterloo Place, London SW1R 4AR. Telephone: 01-930 0922. Closing date for applications 12th April 1980.

Many claim
to know the answer,
but few companies
have the solution
to sell.

Particularly in the development of real-time software, an area of computing so much in demand today. This is where our client company has a major advantage — with a team of in house experts they provide a range of sophisticated software services to leading names in all sectors of industry.

Not content with their success in this area, they have diversified into the small business systems area...

This expansion, coupled with a significant increase in business, has created an excellent opportunity for two Sales Executives.

Based in the South-East (either South or North of Thames) you can expect to earn £15K+ (no ceiling on earnings) and a car and expenses are provided.

If you want to grow rapidly within this expanding company call Tony McGrath.

SALES PROFESSIONALS Given the basic building blocks could you build a business?

Very rarely does an opportunity occur for a sales professional to not only increase his earnings but also to gain the satisfaction from seeing his own business ideas in action.

This is such an opportunity.

Our client Company is an international systems house based in Croydon and they have asked us to identify and select a sales professional to increase their existing turnkey systems project involvement.

You will have all the resources of a company that has

developed a large number of systems for a variety of computer hardware and that are in the enviable position of being a major OEM for most of the major computer manufacturers. Excellent support in a friendly professional environment is also another high major strength.

A high earnings package including a company car and a wide range of fringe benefits is on offer to the successful candidate.

Contact Tony McGrath on 01-637 9611

Suite 201/6 Albany House 324 Regent Street London W1R 5AA 01-637 9611

MANAGEMENT & EXECUTIVE SELECTION

ICL 2960 OPERATORS

—Can we persuade you?

This is just one of the T.V. games which, as a **Dixons** employee you can buy at a substantial discount.

- Two Shifts ●Growth Company
- Stevenage based
- Salaries to £6000 inc.

Two shift working can dramatically change your lifestyle. For the better.

And when you add to that the advantages of working for a go-ahead company like Dixons, you know that these opportunities are some of the best in the marketplace.

Dixons have a massive complex in Stevenage with modern offices and a new, spacious computer suite. This houses a 2Mb ICL 2960 running under VME/B, a number of mini-computers and a range of communications equipment. Further planned additions to the existing hardware will bring new career opportunities.

We are looking for experienced ICL 2900 series operators, preferably with VME/B experience. Ideally, you will be under 30 with an intelligent approach to operational systems and an ambition to broaden your horizons. The opportunities are there. It's up to you to accept the challenge.

Salaries are good, there is a subsidised restaurant, excellent working conditions and real career development prospects. The staff purchase scheme can help you move into a new leisure bracket and the relocation scheme can help you move into Hertfordshire.

So don't delay. Call Mary Stone right away. She will send you more information about Dixons and fix you an interview.

Permanent and
Contract Staff

Hardware Support Management c. £11,500 + car

The creation of a Company such as NEXOS is a unique event. The combination of an innovative and sophisticated range of products for the International Electronic Office Systems Market, considerable financial support and the establishment of a committed team of professionals adds up to one thing—success. NEXOS is destined to become a major force in one of the prime market sectors of the 80s.

Our preparations for entry into the International Market are nearing completion; to strengthen our drive we are now looking for someone 27-45 years of age, and preferably fluent in at least one North European language, to liaise with distributors and provide hardware support and training on all aspects of maintenance and fault diagnosis and repair.

Screenbased word processing equipment is one of our primary products, therefore you should preferably have national or international hardware/systems support

experience, on either disc based computer or word processing systems.

The challenge and rewards of playing an important role in the evolution of NEXOS are two factors a self-motivated and ambitious person will obviously enjoy.

Based in Bristol, there will be fairly extensive travel abroad and the prime responsibilities of this position will involve identifying hardware design and manufacturing problems, providing an efficient and comprehensive support service, and ensuring that distributors also provide an appropriate level of customer service.

Earnings will be in the region of £11,500 p.a. together with an excellent benefit package including:

- * Health Insurance
- * Company car
- * Pension
- * Relocation expenses

Please send written applications giving full details of qualifications and experience in confidence to:

This appointment arises from a development plan to re-structure the Company's information systems over the next 2-3 years. New systems development is based on a mainframe IBM 4341 to be installed in 1980, together with distributed processing facilities on mini-computers.

Do you want to be part of our further development? We can offer excellent opportunities for personal advancement as a

SYSTEMS ANALYST

THE POSITION:

Reporting to the Systems Manager, the appointee will play a major role in systems development in the Company and will be involved with users in designing and implementing a range of new systems.

Candidates will have worked in manufacturing (or a related environment) and will have implemented a major system. Desirable experience would include working with IBM hardware, on-line systems and database. Knowledge of DOS/VS, CICS, TOTAL and COBOL would be an additional asset. Effectiveness in communication is very important as is the ability to understand the business implications of systems design.

THE COMPANY:

Becton Dickinson is a highly diversified manufacturer of health care products. It is one of the largest companies in the rapidly expanding health care industry and the world's leading manufacturer of sterile single use hypodermic syringes and needles. The Irish operation, manufacturing hypodermic syringes and needles for the European market, has had a significant growth rate over the past few years and is continuing to expand its activities here. The Company currently employs in excess of 1,000 people at its two manufacturing facilities in Drogheda and Dun Laoghaire.

THE REWARDS:

A highly attractive salary awaits the successful applicant together with a benefits package including free VHI, non-contributory pension, life assurance and income continuance plans. Generous relocation assistance will be provided where applicable.

THE CONTACT:

If this position interests you, telephone our Systems Manager Bill O'Brien at Dublin 854800.

In total confidence, or write to:
Arthur Gunning, Group Personnel Manager.

SATISFIED?

All too often a good R. & D. product is spoilt by those little extras that occur in the later stages of a project.

If you are going to get it right, you've got to get it right from the start. This is where our client company scores heavily in future planning.

From their R. & D. Centre, North of London, they have and are continuing to deliver, on a global basis, probably the world's most advanced systems in the fields of Transaction Processing, Systems Networking, Communications and High Density Media.

Their massive expansion into the Eighties has created the most exciting positions available in R. & D. today.

If you have a systems software background in either mini or mainframe computers and like to work on stimulating projects, in really pleasant working conditions (they even serve real coffee) we are looking for senior, junior and associate Systems Programmers and Technical Authors.

Salaries range from £8,500 to £10,500+.

A full relocation package is offered. Company benefits include free BUPA, Pension Scheme, Life Insurance and a company stock Purchase Plan.

For further information and interview contact Tony McGrath or Derek Pearson on 01-637 9611

MIDLANDS APPOINTMENTS

Computer Supervisor

Training in BASIC provided

New Installation in Birmingham

Salary up to £7,000 per annum

Specialist Computer Recruitment Ltd

The post of Computer Supervisor, within our Company, is a new and challenging appointment. Our intention is that the successful candidate will create a position which is demanding yet rewarding.

We want a person with the ability to assume immediate responsibility for the effective running of our Nixdorf 8870/1 minicomputer, to maintain systems software and ensure user satisfaction through liaison, training and technical support.

You must also be able to appraise new releases of hardware and software and make recommendations to us, based on their relevance to our particular environment. This is a ground floor opportunity with unlimited potential; you will build the department from scratch.

We will provide full training in BASIC to enable you to maintain systems for your installation. The qualifications required for this position are:-

- *Proven supervisory skills
- *A good working knowledge of minicomputers
- *A basic understanding of programming
- *Ability to produce procedures documentation and reports
- *Knowledge of accounting procedures

We are the UK subsidiary of an American Company involved in the security business. The group has other subsidiaries worldwide. Our success to date is based on total commitment. This is a demanding position, it requires the best. If you think you can handle it, then contact our Advising Consultant, IAN PAYNE ON 021-236 3781 (24 hour answering service).

THE TREE WITHOUT A TOP (Even for Programmers!)

The success of Hambro Life — from assets of around £30m in 1971 to £860m in 1980 — has few, if any, parallels in British commerce.

In less than nine years, in fact, Hambro Life has become the U.K.'s largest unit-linked insurance company.

And the growth rate (a further 47% in new Sums Assured last year) shows no sign of slowing.

So what's behind it?

From the very beginning, integrated computerised systems.

Hambro Life has always made really effective use of new technology.

Phase I launched us.

Phase II carried us clear of the competition.

And Phase III...well, that's where you come in.

1980

£860m

Senior Programming Consultants to £11,500 + car. Programming Consultants to £10,600.

For many companies, the computer room is something tacked on — important, but playing neither a central nor a truly progressive role.

For programmers, that usually means an endless round of maintenance, with the prospect of switching over to systems at some point in their careers.

But at Hambro Life — not so.

Programming itself is (and always will be) a continuing development.

For that is the very nature of the company.

So from a career standpoint, the rewards are not only outstanding, but for programmers who want to advance in their own field, even unique.

The first major stage of Phase III for example — including an entirely new Life system — will be implemented in 1981, and in readiness for that, as well as for many further major developments, Hambro Life requires immediate additions to our Programming staff.

Ideal candidates should have graduate ability and at least seven years' experience in the case of Senior Programming Consultants (who should be under 35) and five years' experience in the case of Programming Consultants (who should be under 32).

Extra benefits

Our outstanding remuneration package includes non-contributory pension, free life cover, BUPA, productivity bonus, profit sharing, and generous assistance with moving to Wiltshire.

The machines

The current configuration is a 3031 (3MB) and a 370/148, both running under OS/VS1. Most recent developments are a 3730 word processor, a 3750 programmable telephone exchange and twin R400 key to disc systems. Software includes IMS, PL/I and LIB/OL.

The people

The youthfulness of Hambro Life is also reflected in our staff — average age, taken throughout the company, is 27. Standards are high, but the atmosphere is informal.

And there is only one way to get on: you simply have to earn it. All promotion is based on merit.

Applications

For a comprehensive booklet, and application form, either ring us or complete and return the coupon.

Post to: Anita Meech, Hambro Life Assurance Limited, Hambro Life House, Swindon SN1 1EL. Tel: 0793-27812 (24hr answering service — reverse charges during office hours).

AES

Leading Manufacturer of Wordprocessing Systems requires

technical
support manager
and software
systems engineers

AES is a strong and rapidly expanding wordprocessing company that is part of the Canada Development Corporation. Their European Headquarters based in Brussels, Belgium, offer many opportunities for career development within a young, dynamic international team.

technical support manager Responsible for training, liaison and issuing of engineering documentation to the distributors and direct sales operations.

software systems engineers To develop application software for wordprocessing systems.

the successful applicants will require a university degree, with emphasis on data processing (GRAD ENG., DIPL. ENG., BSC OR MSC) and fluent English. Two years experience in a similar position would be preferable. Knowledge of assembler and experience with compilers, Intel, 8080 and Z80 microprocessors would be an asset.

Interested parties should send their curriculum vitae to Top Jobs who will treat it in the strictest confidence. Reference AES 11

Top Jobs s.p.a. Bd M. Lemonnier 91-97, 1000 Brussels. Telephone 02-512 98 72

Communications sales
with market leaders

Racal-Milgo Limited is a world leader in the field of data communications and the largest private supplier in the UK. But this is just the beginning.

Our present comprehensive range of equipment (and exciting future products) will enable us to exceed all previous records, which are in themselves the success story of the electronics industry.

We are now recruiting additional SALES ENGINEERS in all areas, who will sell the finest products to computer-based users.

Ideal candidates will be able to demonstrate success in the area of data communications or electronics. More important, though, is your ability to convince us that you could become a successful member of our professional sales team.

In addition to an attractive basic salary you will receive a Company car and commission based on realistic sales targets.

To support our field sales team we also require additional INTERNAL SALES ENGINEERS in our Reading, Manchester, Birmingham and Edinburgh offices.

These important in-house positions involve direct interface with our customers, and our own sales, marketing, engineering and field service departments. We are therefore looking for energetic people with technical backgrounds and a good telephone manner.

All positions carry competitive salaries and benefits packages, and relocation assistance will be given in appropriate cases.

Write to, or call, D.J. Kitchenside, Personnel Officer, Racal-Milgo Limited, Richmond Court, 309 Fleet Road, Fleet, Hants. Tel: Fleet (02514) 22144

RACAL

Just keeping the paper moving?

- ☐ No challenge?
- ☐ No variety?
- ☐ All routine?
- ☐ Uncertain future?
- ☐ No real prospects?
- ☐ Travel treadmill?

Why Culham is different
Because Culham is an experimental laboratory involved in the very latest scientific research into fusion, our computer staff are associated with a variety of interesting projects providing excellent data base experience. The work is rarely routine and offers considerable challenge and job fulfillment. You would be part of a team working on a range of problems, including scientific and administrative ones.

What else we offer
The relaxed, friendly atmosphere helps you settle down quickly once you start. Banking, shopping, sports and leisure activities exist on site and there is easy access to Abingdon and the surrounding towns. Oxford is just 12 miles away.

Why Culham suits single as well as married people
An excellent residential hostel provides pleasant accommodation for those applying from outside the

area. A married applicant may also stay here while arranging housing locally. Culham is situated in attractive Thames Valley countryside away from the hassle of city travel and traffic. We have vacancies for various computer staff - one of them could be right for you. Why not contact us for more details?

Send the coupon to Mrs Sheila Taylor, Culham Laboratory UKAEA, Abingdon, Oxon OX14 3DB, or phone Abingdon (0235) 21840 Extension 6399 or 297.

Culham Laboratory

MINIS AND MAINFRAMES
in rural Bedfordshire

The banks of the Ouse make a real background to busy Bedford, with its blend of historical tradition and modern amenities. Our client, Hunting Engineering, is situated in pleasant countryside south of the town where housing is attractive and close to shops, schools and recreational facilities.

Career opportunities for

EXPERIENCED PROGRAMMERS

Salaries from £5,500 p.a. to £10,900 p.a. plus benefits.

- Commercial, Scientific and Software vacancies
- Big ICL mainframes, Prime minis, micros.
- More new work and more variety.

A programmer at Hunting Engineering is special. But not necessarily a specialist.

There is a big commercial requirement for COBOL programmers. And we would be delighted to recruit you into positions up to team leader.

But the scope is much wider and your horizons won't be limited by your current specialisation.

You could get in on the exciting developments in graphics and CAD. Or solve the tough and demanding software problems created by tomorrow's technology. Or experience the total control and heady responsibility of the one man, one project, one micro revolution.

At Hunting Engineering you can do all these things and more. Without changing jobs, filling in forms and going to endless interviews.

So if you are currently a commercial COBOL programmer on any machine, a scientific programmer or a systems programmer with solid ICL or Prime experience, come along to our Informal Interviews. You will find it a rewarding experience.

CASTLE
RECRUITMENT

Informal interviews

Come and join us and senior d.p. management from Hunting Engineering for a drink and an informal chat about new opportunities, money and future prospects. We will be at the four centres below and look forward to meeting you.

Tuesday 25th March 12.00 noon-9.00pm

STEVENAGE

The Roebuck Hotel. Junction of the Hertford road and the old A1.

Tuesday 25th March 12.00 noon-9.00pm

BEDFORD

The Swan Hotel. On the embankment next to the bridge.

Wednesday 26th March 12.00 noon-9.00pm

LUTON

The Luton Crest Motel. Next to Junction 11 of the M1 motorway.

Wednesday 26th March 12.00 noon-9.00pm

MILTON KEYNES

The Bull Hotel, High Street, Stony Stratford.

If you can't make these dates call Mary Stone. She'll send you details on the company, its track record and what its growth plans can mean for your career.

271 High Street
Berkhamsted, Herts.
Phone: (04427) 73151

Deputy
Editorfor
Systems International

Europe's leading monthly magazine for systems designers, and engineers is looking for a Deputy Editor who will help to direct a small, but enthusiastic team and deputise for the Editor in his absence. Duties will include proposing and researching feature articles on his own initiative. Some foreign travel is involved. Previous experience in technical journalism and/or the computer/microelectronics industries is essential. This is an important position on a highly respected magazine which is reflected in the terms and conditions we offer.

A salary of more than £7,100 will be paid and this is subject to a review which will take effect from April 1.

Please apply to Chris Hipwell, Publishing Director, Dorset House, Stenford Street, London SE1 9LU. Telephone 01-261 8738.

BRITISH AEROSPACE DYNAMICS
DESIGN AND ENGINEERING OFFICE, SPA ROAD, BOLTON

**THE NORTH-WEST'S NEW DESIGN
AND ENGINEERING COMPLEX**

We are engaged in the development of advanced technology guided weapon systems and associated military equipment. We are forming a new group of about 20 people to develop:

SOFTWARE PRODUCTS FOR MINI-MICRO COMPUTER APPLICATIONS IN PRIME EQUIPMENT AND A.T.E.

This group will employ SOFTWARE DESIGNERS, SYSTEM ANALYSTS, PROGRAMMERS and computer orientated ELECTRONICS ENGINEERS with knowledge of CORAL and ASSEMBLER languages for the development of real time software test programs and proving techniques and of testing techniques for microprocessor based products.

We wish to appoint a GROUP CO-ORDINATOR who will lead and develop the Group and take part in the further recruitment of staff.

Facilities available will include a development computer, a remote job entry terminal to a mainframe computer at Stevenage and field equipment for Service use. An initial training period may be required at Stevenage for some of the positions.

We also have vacancies for ATE APPLICATION ENGINEERS working on production ATE, for our Quality Department, with ATLAS experience.

Applications are invited from Computer Scientists or Electronic Engineers of Degree or HNC standard, or Physicists and Mathematicians with suitable background experience in operating systems and computer hardware/software development.

Applicants, male or female, should apply in writing to:
P.G. Blount,
Senior Personnel Officer,
British Aerospace Dynamics Group,
P.O. Box 34,
Lostock Lane,
Lostock, Bolton.

ANALYST PROGRAMMER Circa £7,500 p.a. + benefits

The Barclay Unicom Group Limited, a leading Life Assurance and Unit Trust Company, requires an Analyst Programmer to work in their East London Head Office.

Although we use an ICL 1904S under George III for our mainframe systems we also use a large Data General Eclipse, IBM Main Memory and 16 VDU's, for Online Data Capture. Development plans, which include Interactive New Business Systems for the mini, have created this vacancy which will appeal to an experienced programmer who is keen to move into systems work. The successful candidate will have a good academic background and Cobol experience. This is the opportunity to work in a small team where the scope exists for Team Leadership or Systems Work. The starting salary range of £7,000 to £8,000 is currently under review, while Barclay Bank employees the conditions of employment and fringe benefits are substantial. These include a non-contributory pension scheme, staff restaurant and luncheon vouchers, a profit sharing scheme and also a special house purchase scheme.

Please apply to:

B. L.T. Parker,
Administration Manager,
Barclay Unicom Group Limited,
Unicorn House,
252/254 Romford Road,
London E7 9JB.
Telephone: 01-534 8844.

COBOL PROGRAMMER Up to £8,100 pa European Travel

Spain... France... Sweden... Italy... these are just a few of the places you could expect to visit in your role as a Programmer for our European Sales Operation.

What does the job involve? The Division provides a complete range of credit and leasing plans for Ford Main Dealers and their many retail and industrial customers in 10 European countries. Which means that you will be writing accounting and management information systems for our Brentwood Head Office, your boss and implementing them in the various European locations. This involves problem solving on site and training our European staff.

Qualifications? A sound knowledge of COBOL and the ability to travel for extended stays abroad is essential. Ideally you will have experience of UNIVAC 90/30 equipment. Familiarity of BASIC and RPG II would be an advantage.

The starting salary range will be £6,800 - £8,100 p.a. dependent upon experience. Benefits include 21 days holiday, £180 p.a. holiday bonus, 80p per day LV's and, of course, the Ford privilege car purchase plan. For an application form please write or telephone to:

Steve Whitbourn,
Staff Personnel Officer,
Ford Motor Credit Co. Ltd., Regent House,
1 Hubert Road, Brentwood,
Essex CM14 4QL
Telephone Brentwood 216681
(24 hour answering machine).
This position is open to male and female applicants.

Programmers Major commercial projects to £8,000 + profit share bonus

A leading computer consultancy and software house, Fraser Williams, has a permanent staff of over 250 at offices throughout the U.K. and in North America, serving an impressive list of clients in all sectors of commerce, industry, government and science. Now attractive career openings have arisen at our expanding St. Albans office for experienced Cobol, Basic and Database programmers to work on a variety of challenging commercial projects based on IBM, ICL, Data General, DEC and Vantak minis and mainframes.

We would also be interested to hear from programmers who can demonstrate solid experience on other equipment and would be willing to be retrained. For further details talk to Bob Carr, our Branch Manager, on St. Albans 1551 34301.

Alternatively, write to him at:
Fraser Williams (London) Ltd.,
3a Canbarr House,
17-19 London Road,
St. Albans,
Herts, AL1 1LE.

THE SALES BIT

Follow up that proposal with the hard sell

URING the course of any month I meet quite a few people who want to move from a technical role, typically pre or post sales support, into a selling job. Once the process of evaluating the human characteristics and career potential of the individual is completed, we usually manage to point them in the right direction; which is not necessarily into direct sales.

Sometimes our judgment is wrong, but seldom when we use psychological analysis methods. When we do get it wrong it usually relates to one or both of two simple factors — a reluctance to get involved in cold-calling or an inability to ask for the order. The activities between? No problem.

One of the hallmarks of a salesman who is hesitant to ask for the order is a collection of unsettled sales proposals. In most areas of technical selling one of the final stages of the process is the creation of a sales proposal which typically states what the client needs, what the supplier is proposing in order to satisfy that requirement, the cost of the product or service and the future benefits and sales advantages that are implied.

For the reluctant order closer this is psychologically the end of the selling process. A statement of capability and price having been made, it's up to the client to choose.

I know that subcontracting of responsibility sounds rather naive, but believe me it happens all the time.

Now the really hard selling begins. Admittedly the sales proposals should only be a confirmation of points already agreed, but they are still subject to misinterpretation. The proposition needs to be kept alive and it can still be influenced by hitherto unknown and apparently disinterested parties.

More to the point, the balance can easily be tipped in the favour of the competition merely because they have, since the delivery of their proposals, sustained or enhanced their relationship with the client, confirmed their continuing interest, and perhaps even discovered the prime criteria for decision which could have come about as a direct product of the very proposals themselves.

Proposal follow-up is a key element of the selling process. Failure to do so is a wasteful and destructive act. It could be called 'spinning the wheel' or even 'masochism' to create some-

thing only to destroy it by neglect at the very moment that the justification for its existence might come to fruition. That might sound a bit dramatic, but look at it another way — it's such an awful waste of time!

Proposal follow-up is an essential act which needs to be pursued with enthusiasm and efficient organisation. There is an obvious variety of methods for checking-out the status of a proposal and attempting to close the sale — personal call, telephone, letter and so on, and this is where effective organisation can be very significant.

For my own purposes I have always operated a "proposal league-table" which qualifies all outstanding sales proposals within my territory or indeed my sales operation, by such factors as total value, percentage chance of success, date of origination, decision date, etc. in order to provide a continuing, at-a-glance order of priorities so that the type and timing of appropriate action is clearly identifiable to my needs, my subordinates and myself.

It's the only way of gauging where and when the next sales close can best be achieved. After all, that's what selling really is about, getting the order.

Would-be salesmen need technicians need to get it firmly into their heads that selling is not a device for giving clients the opportunity to buy. It is the process of persuading them to buy a particular product — one's own.

This cannot be achieved simply by casting the bread of proposition upon the uncharitable waters of uncontrolled possibility.

TRADER
Graphics leaflet

A FOUR-PAGE leaflet is available from Computer Instrumentation dealing with the three levels of intelligent graphics plotter controllers for CIL drum and flatbed plotters. Based on the 16-bit TMS 9900 microprocessor, the controllers reduce the overhead on the host computer and personnel by handling all repetitive tasks such as calculating discrete pen movements, carriage positioning and curve and vector drawing. Copies may be had from Computer Instrumentation Ltd, Chandler's Ford, Eastleigh, Hampshire SO5 3YV.

Naked Mini book

AN illustrated 300-page handbook describing the South East Mini Model 1004 is available from Computer Instrumentation Ltd, Chandler's Ford, Eastleigh, Hampshire SO5 3YV.

Puzzle Answer

THE difference between consecutive squares increases by 2 each time, so the first step is to find two numbers given which when squared give the difference between the squares.

The next difference, which we have, is 152,448,400, is accordingly the next high square.

Office complex

To serve the North of England, a new office complex has been opened at 21 East Parade, Harrogate, North Yorkshire HG1 3P. Tel: 01430 20324.

Programmers/Analysts

Fedens of Sandbach, in rural Cheshire, are one of the world's best known and most respected vehicle manufacturers. Our current installation comprises an IBM 370/148 operating under IMS/VS and using Database and Teleprocessing techniques. We're firmly committed to establishing a totally secure company system utilising fully integrated operational data for management reporting and decision making. In order to undertake and maintain this programme we now have the following attractive opportunities.

Chief Programmer
up to £8600 (ref: SV407)

Senior Programmer
up to £6500 (ref: SV391)

Systems Programmer
up to £6000 (ref: SV388)

Application Programmers
up to £3700 (ref: SV412)

Senior Analyst
up to £7100 (ref: SV427)

Ideally programmers will have had experience of 2 languages, one of which should be either PL/1 or COBOL, and for the Senior positions, 3 years' experience is desirable. The Senior Analyst position calls for considerable experience of systems, ideally computer based, in a manufacturing environment with probably an HNC in Engineering or Computer Science. In addition to attractive salaries, these posts offer first rate company benefits including a superannuation scheme. Career prospects are also excellent. Set in the beautiful Cheshire countryside, Sandbach is within easy reach of Manchester, Liverpool and Stoke and has good road and rail links to all other parts of the U.K. If you are interested please contact Sue Thornley, by telephoning Sandbach (09387) 3244, ext. 42, for an application form and return it as soon as possible quoting the reference shown.

Fedens Ltd., Elworth Works, Sandbach, Cheshire, Tel. 09387-3244, Ext. 42.
